How effectively available funding opportunities are converted.

Fundraising productivity index (FPI)

Approach I

For each grant call i,

$$p_i = \begin{cases} 0 & No\ response \\ 0.25 & Concept\ note\ submitted \\ 0.50 & Submitted\ proposals \\ 0.75 & Invited\ for\ interview/shortlisted \\ 1.00 & Banked \end{cases}$$

Then:

$$\boxed{\text{FPI} = \frac{\sum_{i=1}^{n} p_i}{E} \times 100}$$

With:

E= eligible grant call opportunities identified

p_i= weight of the highest stage reached for a grant call i

Example

YEAR xx:

Grant calls opportunities	20
No response	8
Concept note submitted	4
Proposal submitted	5
Invited for interview	2
Funded	1

We have then

$$FPI = \frac{(8 \times 0) + (4 \times 0.25) + (5 \times 0.50) + (2 \times 0.75) + (1 \times 1.00)}{20} \times 100$$

$$= \frac{6}{20} \times 100 = 30$$

Finding:

KIPRE converted available funding opportunities into funded-project equivalents at 30% of the theoretical maximum achievable level.

Approach II

Each grant opportunity call i we define:

A_i= funding amount associated with a grant call

p_i= Weights as described above

$$FPI = \frac{\sum_{i=1}^{n} A_i \, p_i}{\sum_{i=1}^{n} A_i} \times 100$$

Example

YEAR xx:

Grant call	Amount	Stage	p_i	$A_i p_i$
1	1,000,000	Funded	1.00	1,000,000
2	800,000	Interview	0.75	600,000
3	600,000	Proposal submitted	0.50	300,000
4	400,000	Concept note submitted	0.25	100,000
5	200,000	No response	0.00	0
6	2000000	No response	0.00	0
Sum	**3,000,000**			**2,000,000**

$$\boldsymbol{FPI = \frac{2,000,000}{3,000,000} \times 100 = 66.7\%}$$

Finding

KIPRE achieved 66.7% of the maximum attainable fundraising effort across all identified funding opportunities, after accounting for both the value of opportunities and the stage reached in the fundraising pipeline.
