CHAPTER ONE: INTRODUCTION

1.0 Preamble

This Chapter covers the Historical Background of the Kenya Institute of Primate Research, rationale for development of the Human Resource Instruments, Terms of Reference, Methodology, Expected Output and Organization of the Report.

1.1 Historical Background

The Kenya Institute of Primate Research (KIPRE; formally, Institute of Primate Research under the National Museums of Kenya) is a biomedical pre-clinical research facility which has existed since 1958. Through a legal notice No. 273, 2017, cited as the Kenya Institute of Primate Research (KIPRE), was initially recognized as a body Corporate under the Science Technology and Innovation Act of 2013 No. 1 October 2022 declaring KIPRE as a semi-autonomous government agency (SAGA), whose mandate is to improve human health through biomedical research. In January, 2023, KIPRE was then domiciled in the Ministry of Health, State Department for Public Health and Professional Standards through the Presidential Executive order No. 1 of 2023.

KIPRE is located in Karen, Nairobi in Oloolua forest, a serene environment for research with a beautiful nature trail. Over time the pre-clinical research has expanded tremendously and currently has various research areas namely: Tropical and infectious diseases, Reproductive Health and Biology; Non-communicable disease; Snake bite research and intervention, One-Health research on emerging pathogens and diseases and primate ecology and conservation. Additionally, KIPRE provides early warning signs for emerging pandemics; addresses the emergence of zoonotic diseases under a one health program; develops and undertakes the production and commercialization of vaccines, drugs, medical interventions and services for reproductive health, infectious diseases and non-communicable diseases to improve human health.

KIPRE is therefore a lead SAGA in preclinical research leading to development of medical products to improve human health and quality of life and hence supporting the government agenda for Universal Health Coverage. To this end, KIPRE has instituted reforms that are geared towards improving efficiency, service and effectiveness of research for health.

KIPRE, formerly IPR, was a directorate of the National Museums of Kenya and operated under the 13-tier grading system. Upon its establishment as a corporate body through the legal instruments (Legal Notice No. 273 of 2017, ST&I Act 28 of 2013) KIPRE was categorized by SCAC under category 4B which falls in

Research Institutions Category. Through interaction with the current State corporation Guidelines issued by the Public Service Commission, KIPRE proposes a 13 tier grading system for its operationalization.

1.2 Rationale for Development of the Human Resource Instruments

The Kenya Institute of Primate Research was established in the year 2017 through Legal notice No. 273, 2017 under the Science Technology and Innovation Act of 2013. In January, 2023, KIPRE was then domiciled in the Ministry of Health State Department for Public Health and Professional Standards through the Presidential Executive order No. 1 of 2023.

Since its establishment, the Institute has operated without HR Instruments. There is therefore a need to develop HR instruments that are aligned with current changes including the following:

- (i) Functions of the Institute as provided in the Legal Notice;
- (ii) Public Service Commission Guidelines on Development and Review of HR Instruments in State Corporations issued in August 2023;
- (iii) Mandate of the Ministry of Health
- (iv) New Strategic Plan and Universal Health Coverage

1.3 Terms of Reference

The following were the agreed Terms of Reference (ToRs) for the assignment:

- (i) Develop an organizational structure aligned with the mandate of the Institute as outlined in the Legal notice No. 273, 2017;
- (ii) Determine optimal staffing levels for the Institute;
- (iii) Develop Career Guidelines for staff of the Institute;
- (iv) Develop Human Resource Policies and Procedures Manual for the Institute;
- (v) Develop a salary structure for the Institute; and
- (vi) Address any other matter related thereof.

1.4 Interpretation of the Terms of Reference

The above ToRs were interpreted as follows:

- (i) There is need to unbundle the functions of the Institute as outlined in the Legal notice No. 273, 2017 and develop an appropriate organizational structure well aligned to the mandate of the Institute;
- (ii) In order to execute the mandate and functions of the Institute, there is need to determine an optimal staffing level that will support the new organization structure;
- (iii) There is need to undertake job analysis with a view to determine the skills, competencies and experience required and develop career progression guidelines to facilitate recruitment, deployment and promotion/advancement of staff in the Institute;
- (iv) There is need to develop a human resource policies and procedures manual and align it with existing national laws and government regulations and guidelines;
- (v) There is need to develop a salary structure for the Institute to facilitate attraction and retention of suitably qualified and experienced staff in the different grading levels; and
- (vi) There is a need to undertake a situational analysis to identify challenges related to the Institute's legal framework, current organization structure, staffing and operations with a view to make appropriate recommendations.

1.5 Methodology

The following methods for collecting and analysing information were used in carrying out the exercise:

(a) Literature Review

The following legal instruments, policy documents and guidelines among other literature were reviewed:

-

- (i) Labour relations Act 2007
- (ii) Employment Act 2007
- (iii) Labour institutions Act 2007
- (iv) Workman injury benefits Act 2007
- (v) Occupational health and safety Act 2007
- (vi) Pension Act Cap 189
- (vii) Retirement benefits Authority Act 1997
- (viii) Kenyan Constitution 2010
- (ix) Public Service Commission Human Resource policies & manual procedures 2016
- (x) Human resource development policy for public service June, 2015
- (xi) Public service commission discipline manual for the public service revised 2022
- (xii) HIV policy 2005
- (xiii) State corporation Act, Chapter 446
- (xiv) Public officers leadership and ethics Act, 2003

(xv) Gazette Notice 2013, 2017

(b) Group Discussions and brainstorming Sessions

The team held group discussions and brainstorming sessions which provided in-depth understanding on various issues related to the terms of reference.

1.6 Expected Outputs

The following are the expected outputs: -

- (i) Report on organizational structure, grading and staff establishment;
- (ii) Career Progression Guidelines for staff of the Institute;
- (iii) Human Resource Policy and Procedures Manual Report; and
- (iv) Report on Salary and Remuneration Structure for the Institute Staff.

1.7 Organization of the Report

The Report comprises five (5) Chapters whose content is as indicated below:

Chapter one (1) covers the background, rationale of the assignment, terms of reference, interpretation of the terms of reference, methodology used in undertaking the assignment, expected deliverables and organization of the Report.

Chapter two (2) Contains the current organizational structure and staffing of the Institute. The chapter also highlights the observations on issues affecting the operations of the Institute and provides recommendations to address the identified challenges.

Chapter three (3) outlines the proposed grading, organizational structure, functions and staffing levels for the Institute.

Chapter five (5) contains the conclusion and summary of key recommendations.

CHAPTER TWO: CURRENT ORGANIZATIONAL STRUCTURE

2.0 Preamble

This Chapter provides the functions, mandate, vision, mission, core values and current organizational structure and staffing of the Kenya Institute of Primate Research.

2.1 Functions of the Institute

KIPRE derives its mandate from Legal Notice No. 273, The Science Technology and Innovation Act (No. 28 of 2013), Kenya subsidiary legislation 2017, which spells out its objectives and functions as follows:

- (a) To conduct basic, pre-clinical and translational research using non-human primates and other experimental animals in liaison with the relevant government agencies;
- (b) Establish an incubation centre linking research and industry in the health products value chain;
- (c) Contribute to early warning systems for emerging and re-emerging diseases;
- (d) Establish and operate a notional breeding colony of non-human primates and other experimental laboratory animals for research purposes;
- (e) Provide national in-vitro fertilization services for endangered wildlife of Kenya in liaison with relevant Government agencies;
- (f) Undertake studies in non-human primate conservation biology and primatology
- (g) Create and maintain a national non-human primate database on consensus research affiliations, and geo-spatial distribution of non-human and related zoonotic diseases;
- (h) Serve as a national research centre for venom and anti-venom including snake bite disease;
- (i) Undertake basic and pre-clinical research on reproductive health, infectious and non-communicable diseases using non-human primates;
- (j) Develop and characterize both non-human primate and other experimental animal models for priority diseases in Kenya;
- (k) Undertake research in Human African Trypanosomiasis disease
- (l) Undertake capacity building in animal welfare, ethical use and care of non-human primates and other experimental animals in laboratory settings;
- (m) Perform any other function which is incidental to the performance of any of the foregoing functions.

Vision

To be a global center of excellence in innovative basic and pre-clinical biomedical research and non-human primate conservation.

Mission Statement

To improve human health and biodiversity through advances in basic and preclinical biomedical research and non-human primate conservation.

Core Values

The following are the Core Values of KIPRE

- (i) Research integrity and ethics (evidence-based data)
- (ii) Animal care and welfare
- (iii) Planning and Quality Management (QC and QA)
- (iv) Local and international Collaboration and team work
- (v) Commitment to excellence through professionalism
- (vi) Corporate Citizenship
- (vii) Adherence to good corporate governance

2.2 Current Organization Structure

The organizational structure of the Institute is broadly categorized into two tiers, which comprises the Board and the Management.

(a) Board of Directors

The Management of KIPRE will be vested in the Board of Directors who will provide policy, strategic direction and oversight, while the day-to-day operations will be delegated to the Director General.

(b) Management

The Management is responsible for the day-to-day operations of the Institute and is structured from the Office of the Managing Director/CEO to the various Directorates, Divisions and Sections/Units as determined by the Board.

To effectively discharge its functions, the Institute will be organized into the Director General/CEO, three (3) Directorates, Eight (8) stand-alone Divisions and One Committee as indicated below.

1. Office of the Director General/Chief Executive Officer

2. Directorates

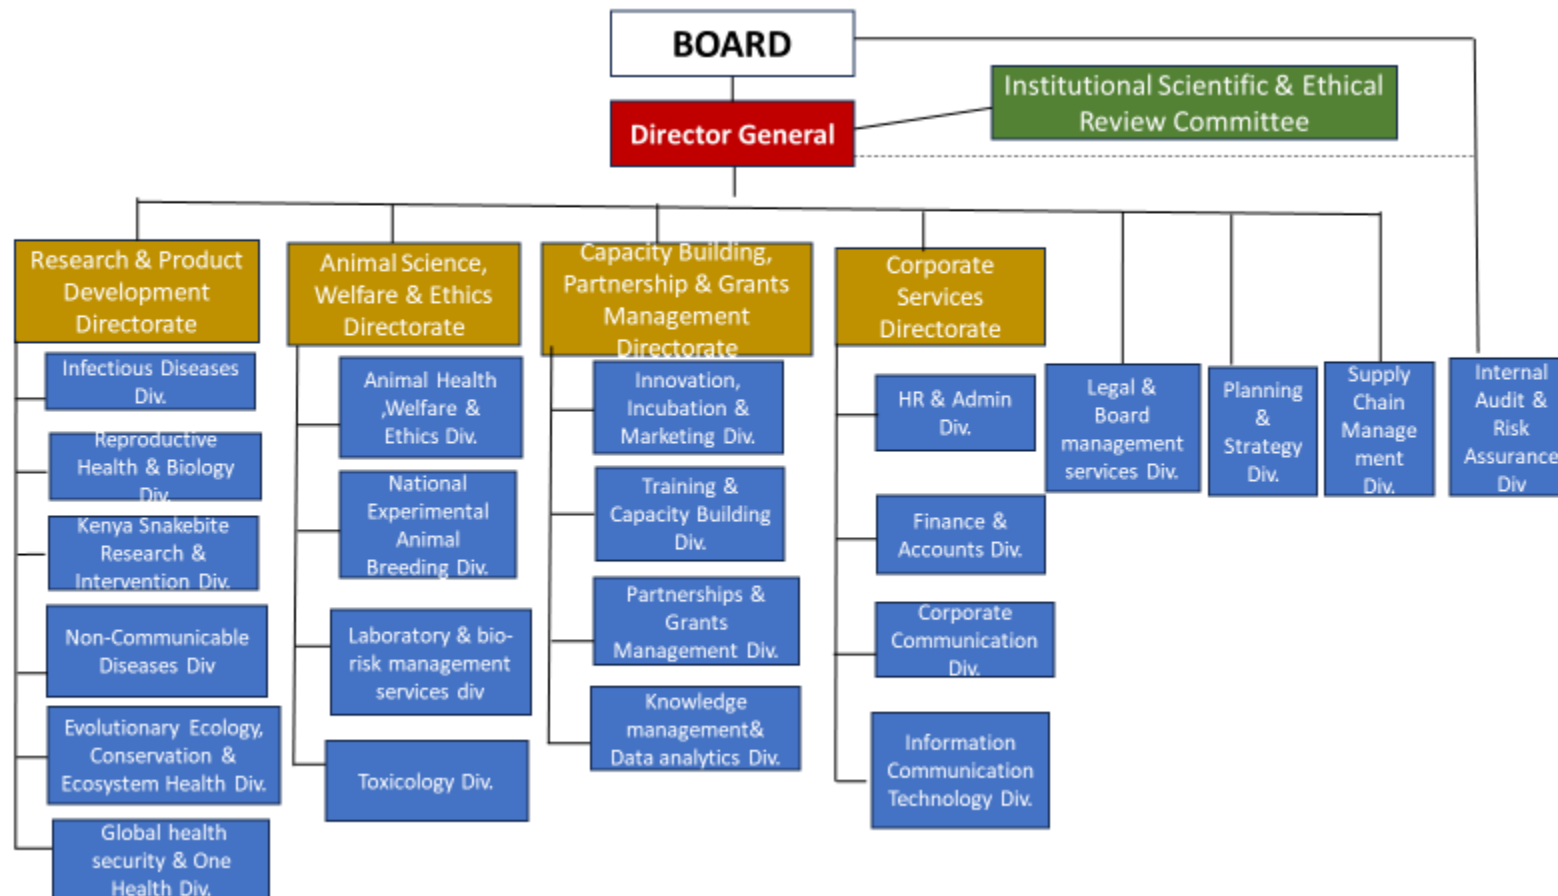

- (i) Research & Product Development
- (ii) Animal Science, Welfare and Ethics
- (iii) Capacity Building, Partnership & Grants Management
- (i) Human Resource & Administration
- (ii) Finance & Accounts
- (iii) ICT Division
- (iv) Corporate Communication

Stand-alone Divisions

- (v) Supply Chain Management
- (vi) Board Management and Legal Services
- (vii) Planning Division
- (viii) Internal Audit

3. Institutional Scientific & Ethical Review Committee (ISERC)

Fig. 1: Current Organization Structure - KIPRE

Current Grading Structure

Currently the Institute operates on a 13 Tier Grading Structure ranging from KIP 1 for the CEO and KIP 13 for Office Assistant.

2.4 Staff Establishment

The Institute has an approved staff establishment of three hundred and fifty -eight (358) comprising of for technical services andfor support services.(to hr)

Table 1: Current staff establishment

CHAPTER THREE: SITUATIONAL ANALYSIS AND FINDINGS

Preamble

The Chapter provides an analysis of the challenges that the Institute is facing in relation to its legal framework and funding and recommendations to address the identified challenges with a view to enable the Institute to achieve its mandate as shown in the table.

Table 2: Challenges and Recommendations

Issue	Challenge	Proposed recommendation
1) KIPRE Legal notice 2017. (Legal notice No. 273, The Science, Technology and Innovation Act (No. 28, 2013))	This legal notice is Based on the Min of Education Science & Tech. (7b)	This should be amended to reflect KIPRE being under MoH
	The function of KIPRE with regards to IVF which confines KIPRE to wildlife (5e)	To include IVF for humans and experimental animals.
	The Current legal notice only captures capacity building on animal welfare (5l)	KIPRE is a training institution that offers a number of training programs. Namely: (i) hands-on training on research to both undergraduate and postgraduate students. (ii) training to both local and international universities through established partnerships; (iii) short and long-term training and provides professional

Issue	Challenge	Proposed recommendation
		certificates, (iv) educational tours to university and tertiary students. Thus the training aspect should be captured in legal notice as one of the functions.
	KIPRE is a national focal point for breeding and capacity building of use of animals for preclinical research (I).	KIPRE should be mandated to become a national center of excellence for laboratory animal science.
2) Funding	There is limited funding to KIPRE to support research functions of the institution as provided for in the legal notice No. 273	Allocation of at least 500M annually from exchequer for KIPRE to be able to drive the national research agenda towards development of health product therapies in order to support supporting UHC
3) Salary Structure	Lack of an approved Salary Structure.	Liaise with SRC and National Treasury to get an approved Salary Structure.
4) Amendment of the Legal notice to an Act of Parliament	Delay in passing of the KIPRE bill to an Act of Parliament.	CEO to follow up with the relevant Authorities.
5) Understaffing	The Institute is currently understaffed due to lack of funds for recruitment, natural attrition and expanded mandate.	Seek approval from the relevant stakeholder e.g. PSC,NT etc. to address the issue.
6) Contention on ownership of assets.	Transfer of movable and immovable assets from National Museums of Kenya to KIPRE which delinked from NMK.	Liaising with the National Treasury/ Attorney General and the Cabinet secretaries for the two institutions to determine ownership.
7) Transition	Transition to operationalize fully as a fully-fledged state corporation.	Liaise with the relevant Authorities to ensure smooth transition and operationalization.
8) Infrastructure	Inadequate infrastructure to support research	The government to allocate more funding for infrastructural development

CHAPTER FOUR: PROPOSED ORGANIZATIONAL STRUCTURE, GRADING AND STAFF ESTABLISHMENT

3.1 Preamble

The Chapter provides the grading structure, organization structure and staff establishment for the Kenya Institute for Primate Research.

Principles of Organisation Design

1.1.1. Organisation Structure

An organizational structure depicts the technical configuration of roles and responsibilities of an organization, derived from the organization's mandate/functions. An optimal fit for purpose organizational structure would derive the following benefits to an organization: attainment of objectives through proper coordination of activities; minimizes conflicts between/among individuals and/or functional areas over jurisdiction; eliminates overlaps and duplication of work; facilitates employees career growth; facilitates effective wage and salary administration; facilitates communication at all levels of the organizational hierarchy; provides a sound basis for effective planning; results in improved cooperation, sense of common purpose and pride among employees; and encourages creativity and innovativeness.

The following principles of organization design informed the proposal on the KIPRE organizational structure: -

- (a) Reflects the core functions of the organization: -
 - (i) Responsive to the needs of the Union in line with the functions assigned to the KIPRE; and
 - (ii) Respond to changing priorities and circumstances.
- (b) Grouping of related functions and demarcates technical (core) and shared services;
- (c) Reflects the areas of strength – SWOT: -
 - (i) Size of the KIPRE;
 - (ii) Portfolio based – Single line structures negates the principle of delegation/workload inadequate;
- (iii) Functional rather than position based and based on workload indicators staffing norms;
- (iv) Reflects level of outsourcing of non-core functions;

- (v) Level of automation of work processes, mode of service delivery, whether capital or labor intensive;
- (vi) Complexity, geographical spread and the extent and need for centralization versus decentralization;
- (vii) Span of control, chain of command and unity of command;
- (viii) Depicts reporting relationships within the organization thereby clarifying roles and responsibilities as well as workflow;
- (ix) Demarcates activities and roles of players within the organization for internal harmony, stability and efficiency;
- (x) Interfaces activities of units and sub-units in an effective manner;
- (xi) Clarifies the roles and linkages of the institutions' internal and external players; and
- (xii) Operational environment, desirable traditions and culture: -
 - Allows participatory decision making; and
 - Provides an equitable, fair, open and non-discriminatory working environment.

1.1.2. Grading Structure

A Job Grade refers to a collection of jobs that are considered to be of the same value or worth. A grading structure consists of a series of grades or ranks showing the hierarchy of jobs, and through which an employee can progress. It provides for development of a hierarchy of jobs indicating the levels of expertise in different positions.

A well-designed grading structure would enable the Board to achieve a balance between defined roles in a particular cadre and the need for attraction, retention and career growth of employees. An optimal grading structure should neither be too short nor too long. Grading structure also enables an organization to execute control over the implementation of pay policies and budget.

The development/review of grading structure is informed by various factors such as Mandate, Operational Environment, age, size and complexity, current number of grades and geographical spread of the organization.

An elaborate and well-designed grading structure has various advantages to an organization, including: providing clearly defined career paths for staff, hence more prospects for promotion and career opportunities leading to commitment and improved performance; facilitates attraction of staff; facilitates efficient leadership and communication; provides clear lines of authority and reporting within functional areas; provides for a clear chain of command; provides clarity on roles of each position hence improved delegation, accountability for actions and decisions at each management level; facilitates close supervision of employees through optimal spans of control thereby encouraging adherence to rules; creates a culture of loyalty towards teams, departments and the organization as a whole; promotes specialization thereby increasing productivity; and fosters workload distribution through division of work into specific tasks and distribution of the same amongst employees.

A fit-for-purpose grading structure has the following features: -

- (a) Ranking of jobs from the highest to the lowest;
- (b) Distinct and transparent grades without hidden elements or sub-grades (such as 2a, 2b, 2c) for purposes of equation and administration of salary and benefits;
- (c) Grades and designations that are seamless across cadres in the organization;
- (d) Substantive designations such as General Manager or Director and not deployment titles such as, Head of Function;
- (e) Consistent nomenclature providing for either directorship or managerial designations without combining the two in a cadre;
- (f) Hierarchy of designations reflecting the relative seniority within and across cadres and functional areas; and
- (g) Adequate grades to facilitate differentiation of roles and facilitate integration and coordination of functions while creating room for career growth and development and mitigating against undue stagnation.

1.1.3. Staff Establishment

A staff establishment depicts the staffing levels that are considered optimal for the achievement of an organization's objectives. A staff establishment is futuristic and therefore filling of established posts should be gradual rather than immediate.

An optimal staff establishment forms the basis for staffing. Optimal staffing levels are informed by the following parameters:

- (a) Focus on core business of the organization, while observing the 70:30 ratio of technical to administrative/shared services staff. Technical in this respect is determined by the Job rather than the qualifications as informed by the mandate of the organization;
- (b) The obtaining workload based on the services expected by the client to ensure optimal utilization of staff;
- (c) Geographical spread;
- (d) Staffing Norms;
- (e) Outsourcing functions that are peripheral to the core business of the organization except in special circumstances e.g., security, cleaning, courier services;
- (f) Level of automation of the various functions;
- (g) Resultant financial implication on personal emoluments arising from the reviewed staff establishment;
- (h) Nature of the mandate of the organization, whether delivery is labor or capital intensive; and
- (i) Clear justification for each position.

Functional Analysis

A functional analysis of the mandate of the KIPRE revealed the following Directorates and Divisions: -

Table 3: Functional Analysis

S/No	Functions/Mandate	Thematic Areas	Proposed Directorate	Proposed Divisions	Skills required
(a)	conduct basic, pre-clinical and translational research using non-human primates and other experimental animals in liaison with the relevant government agencies;	Basic and Translational Research	Research and Product Development	Infectious Diseases; Global Health Security and One Health; Reproductive Health and Biology; Non-Communicable Diseases; and Kenya Snakebite Research and Intervention	Research skills Analytical Skills Diagnostic Skills Bioinformatics microbiology parasitology

3.2 Grading Structure

The proposed grading structure ranges from KIP 1 to KIP 13 whereby KIP 1 is the highest grade and KIP 13 is the lowest grade as indicated in the table below.

In line with the Guidelines for Development of Human Resource Management instruments for State Corporations and Public Universities, August 2023, the KIPRE grading structure will range from KIP 1 for the Chief Executive Officer which is the highest grade to KIP 13 for Office Assistant III which is the lowest grade in the Grading as indicated in Table 4 below. Reserving the highest grade at KIP 1 is meant to curb grade drift.

Entry into the KIPRE's grading structure will be determined by prerequisite basic academic qualifications and experience for appointment to the various grades as indicated in Table 5 below.

Table 3: Proposed Grading Structure

Designation	KIP GRADE	CSG/ Equivalent Grade
Director General/CEO	1	3/U
Senior Chief Research Scientist/ Director	2	4/T
Chief Research Scientist/ Deputy Director	3	5/S
Senior Principal Research Scientist/ Assistant Director	4	6/R
Principal Research Scientist/ Principal Officer/ Principal Assistant	5	8/N
Senior Research Scientist/ Senior Officer/ Senior Assistant	6	9/L
Research Scientist I/ Officer I/ Assistant I	7	10/K
Research Scientist II/Officer II/Assistant II	8	11/J
Assistant III/ Senior Driver/Senior Technician	9	12/H
Senior Office Assistant/ Driver I /Technician I	10	13/G
Technician II/ Driver II/ Office Assistant I	11	14/F
Driver III/ Office Assistant II	12	15/E
Office Assistant III	13	16/D

Entry into the Grading Structure will be determined by requisite basic and professional qualifications for appointment to various grades/levels. Further, officers with the same qualifications and experience should be appointed to the same job grades/levels.

Table 4: Grading Structure and Minimum Requirement

Designation		KIP Grade	CSG/JG Equivalent	Minimum Requirements for Appointments
Technical	Non-Technical			
Director General/CEO		1	3/U	A person shall be qualified to be appointed as Director-General where such person:- i. Has a Doctorate degree in biomedical sciences or other related scientific, fields; ii. Has at least ten years' experience in the management of a public institution; iii. Leadership course lasting not less than four (4) weeks (from a recognized institution; and iv. Meets the requirements of Chapter Six of the Constitution of Kenya.
Senior Chief Research Scientist	Director	2	4/T	Research Scientist v. Bachelor's Degree in a relevant field from a recognized institution; vi. Master's Degree in a relevant field from a recognized institution; vii. Doctor of Philosophy (PhD) in a relevant field from a recognized institution; viii. Cumulative service period of (15) years' cumulative relevant work experience, three (3) of which must have been at Grade of Chief Research Scientist or in a comparable relevant position. ix. Cumulatively published at least 12 peer-reviewed publications in ISI – indexed journals / book chapters of which at least six (6) are as first author from the latest date of promotion; x. Co-designed or participated in the development of at least two (2) multi-

Progression for Office Assistant				
	Senior Office Assistant	10	12/H	- KCSE Mean Grade D (Plain) or its equivalent from a recognized institution. - Cumulative service period of nine (9) years' relevant work experience, three (3) years of which should have been at the grade of Office Assistant I or in a comparable position. - Proficiency in computer applications.
	Office Assistant I	11	13/F	- KCSE Mean Grade D (Plain) or its equivalent from a recognized institution. - Cumulative service period of six (6) years' relevant work experience, three (3) years of which should have been at the grade of Office Assistant II or in a comparable position. - Proficiency in Computer applications.
	Office Assistant II	12	14/F	- KCSE Mean Grade D (Plain) or its equivalent from a recognized institution. - Cumulative service period of three (3) years' relevant work experience at the grade of Office Assistants III or in a comparable position. - Proficiency in computer applications.
	Office Assistant III	13	15/E	Entry Grade for Office Assistants or equivalents - KCSE Mean Grade D (Plain) or its equivalent from a recognized institution. - Proficiency in computer applications.

3.3 Proposed Organization Structure and Staffing

The organizational structure of the Institute is broadly categorized into two tiers, which comprises the Board and the Management.

(a) Board of Directors

The Management of KIPRE will be vested in the Board of Directors who will provide policy, strategic direction and oversight, while the day-to-day operations will be delegated to the Director General.

(b) Management

The Management is responsible for the day-to-day operations of the Institute and is structured from the Office of the Managing Director/CEO to the various Directorates, Divisions and Sections/Units as determined by the Board.

To effectively discharge its functions, the Institute will be organized into the Director General/CEO, Four (4) Directorates, four (4) stand-alone Divisions and One Committee as indicated below.

1. Office of the Director General/Chief Executive Officer

2. Directorates

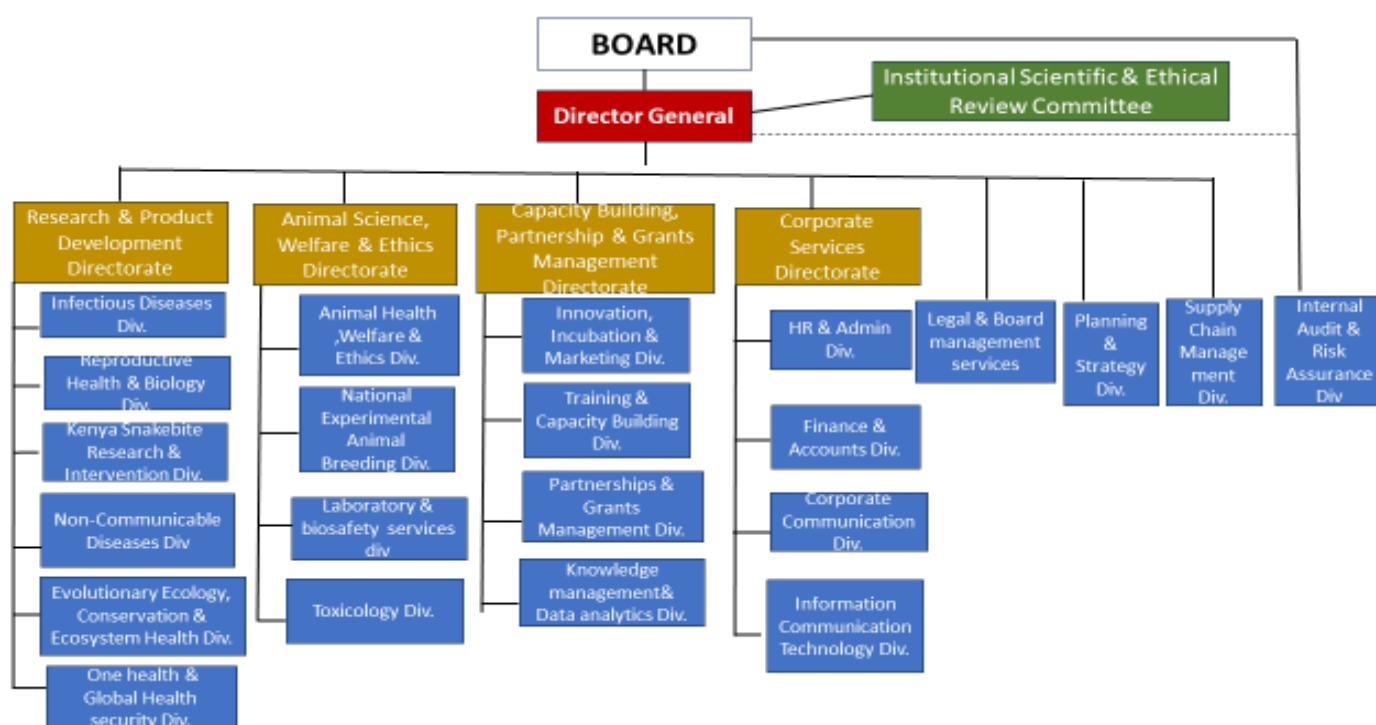

- (i) Research & Product Development
- (ii) Animal Science, Welfare and Ethics
- (iii) Capacity Building, Partnership & Grants Management
- (iv) Corporate Services

3. Stand-alone Divisions

- (i) Planning and Strategy
- (ii) Supply Chain Management
- (iii) Board Management and Legal Services
- (iv) Internal Audit and Risk Assurance

4. Institutional Scientific & Ethical Review Committee (ISERC)

Fig 2: Proposed Organization Structure

3.4 Office of the Director General

a) Rationale

The Office of the CEO is established pursuant to Section 9 (1) of the Legal notice No. 273, 2017. The Office is responsible to the Board of Directors for the implementation of the Institute's strategic goals and the management of its resources; including giving direction and leadership to the achievement of the institute's mission, the development of its strategy and the attainment of its annual goals and objectives.

b) Functions

The functions of the Office of the Director General/CEO entail: -

- (i) Chief Accounting officer of the Institute;
- (ii) Secretary to the Board of Directors;
- (iii) Serves as the link between the Board and Management;
- (iv) Official spokesperson of the organization and responsible for stakeholder management and the enhancement of the corporate image of the organization;
- (v) Responsible for the execution and communication of the Board's strategies decision and policies;
- (vi) Manage the budget of the Institute and ensure that its funds are properly expended and accounted for;
- (vii) Develop and implement an effective performance management system;
- (viii) Provide regular, thorough and prompt communication to the Board on key technical financial and administrative matters;
- (ix) Ensure that the organization has effective management structure including succession plan;
- (x) Provide strategic leadership in accordance with the mandate of the Kenya Institute of Primate Research ACT;
- (xi) Ensuring implementation and fulfilment of the policies, programs and agreed performance targets and service standards of the Institute;
- (xii) Lead, oversee and ensure the implementation of applicable Research standards in Kenya in the Institute;
- (xiii) Oversee the activities of the Institute's resources and ensure they are optimally utilized and fully accounted for in line with existing laws and regulations;

- (xiv) Ensure continuous improvement in the quality, value of services to all research activities in the Institute;
- (xv) Provide Guidance and spearhead research activities in the institute in line with the best research practices globally;
- (xvi) Develop products provided by the Institute to the public and other stakeholders in Kenya and the world;
- (xvii) Foster and maintain a conducive work environment, and enhance corporate culture that promotes ethical practices and good corporate governance; and
- (xviii) Maintain effective collaboration and partnerships with organs of Government and Government agencies, county Governments, international organizations, private sector, non-governmental organization and other Stakeholders.

c) Establishment

In order to execute the above functions, the office of the Director General / CEO will be staffed as follows:

Table 5: Establishment for the Office of the Director General/ CEO

Designation	Grade KIP	Approved Establishment	In post	Proposed	Justification
Director General / CEO	1	1	1	1	To head the Institute
Personal Assistant	4	0	0	*	Picked from serving technical officers not below KIP 4
Principal Office Administrator	5	1	0	1	Offer office administrative services
Senior Office Administrator	6		1		
Senior Office Assistant	9	1	1	1	Provide hospitality support
Office Assistant I	10		0		

Principal Driver	8	1	0	1	Provide driving and logistic services
Senior Driver	9		1		
TOTAL			4	4	

3.5 Directorate of Research and Product Development

a) Rationale

The directorate draws its mandate from Article 5 (a-c) & (f-k) of Legal Notice No. 273 of 2017 (ST&I Act, No. 28 of 2013) to undertake basic, preclinical, biomedical and translational research using non-human primates and other experimental animals.

b) Functions

The Directorate is responsible for the following key functions: -

- (i) Provide strategy on basic, pre-clinical and translational research using non-human primates and other experimental animals in liaison with the relevant government agencies;
- (ii) Guide in the development of early warning systems for emerging and re-emerging diseases;
- (iii) Guide studies on non-human primate conservation biology and primatology;
- (iv) Coordinate the establishment and maintenance of a national non-human primate database on census, research affiliations, and geo-spatial distribution of non-human and related zoonotic diseases;
- (v) Support the establishment of a national research centre for venom and anti-venom including snake bite disease;
- (vi) Coordinate basic and pre-clinical research on reproductive health, infectious and non-communicable diseases using non-human primates;
- (vii) Oversee development and characterization for both non-human primate and other experimental animal models for priority diseases in Kenya;
- (viii) Coordinate research in Human African Trypanosomiasis disease;
- (ix) Guide in research fundraising activities; and

- (x) Supervise dissemination of scientific findings through publications, conferences, seminars and workshops.

c) Staff Establishment

The Directorate of Research and Product Development will be staffed as follows: -

Table 6: Establishment for the Director, Research and Product Development Directorate

Designation	Grade KIP	Approved establishment	In post	Proposed	Justification
Director, Research and Product Development	2	1	0	1	Head of Directorate
Office Administrator II/I	8/7	1	0	1	Offer secretarial services
Total		2	0	2	

The Directorate will be organized into Six (6) Divisions namely: -

- (i) Infectious Diseases;
- (ii) Reproductive Health & Biology;
- (iii) Kenya Snakebite Research & Intervention;
- (iv) Non-Communicable Diseases;
- (v) Evolutionary Ecology, Conservation & Ecosystem Health; and
- (vi) One Health and Global Health Security;

3.5.1 Infectious Diseases Division

a) Rationale

The division is responsible for conducting and coordinating basic, preclinical and translational research in infectious, communicable, emerging and re-emerging diseases and pathogens. The division contributes to understanding disease pathogenesis, developing and characterizing experimental models, advancing vaccines, therapeutics, diagnostics and biologics and translating research findings into health

products and public-health solutions.

b) Functions

The division is responsible for the following functions:

- (i) Conduct basic, pre-clinical, translational research in infectious, communicable, tropical, neglected, emerging and re-emerging diseases and pathogens using non-human primates (NHPs) and other experimental animals;
- (ii) Supervise and coordinate research in Virolal Pathobiology, Microbial, Parasitic and Vector Pathobiology; and Vaccines, Immunopathology and Immunotherapeutics sections;
- (iii) Support the discovery, development, and preclinical evaluation of vaccines, therapeutics, diagnostics and biologics, including identification and evaluation of active molecules and other promising intervention candidates;
- (iv) Guide the dissemination of scientific findings through publications, conferences, seminars, workshops, policy briefs and other knowledge-exchange platforms;
- (v) Provide scientific and technical expertise to support KIPRE's health-product value chain and research-to-product development activities, in collaboration with the relevant institutional functions.
- (vi) Contribute to capacity building and mentorship in infectious disease research, experimental model development, laboratory science and other related disciplines.

The Infectious Diseases division will be organized into three (3) sections namely:

- (i) Viral Pathobiology;
- (ii) Microbial, Parasitic and Vector Pathobiology ;
- (iii) Vaccines, Immunobiology and Immunotherapeutics ;

The functions and staffing of the sections are as provided below.

1) *Virology Pathobiology Section*

The Section is responsible for undertaking basic, preclinical and translational research in virology pathobiology using non-human primates and other experimental models, with the aim of understanding viral-biology, host-virus interactions, mechanism of viral pathogenesis and disease progression and translating findings into improved management and interventions.

The specific functions of the section entails:

- (i) Develop non-human primate models of viral human disease for pre-clinical studies and investigation of mechanisms of infection/pathogenicity and disease progression for human viral infections.
- (ii) Focus on how different viruses infect and disseminate into the host system and identification of receptors they utilised.
- (iii) Undertake studies on virus and host determinants to enhance disease association (cell tropism), interaction of enveloped viruses with the host including viral vaccine development, testing and therapeutic studies.
- (iv) Develop in-vitro and ex-vivo models for the study of viral infection, replication, pathogenesis and host-virus interaction.
- (v) Conduct co-infection studies in collaboration with other programs.
- (vi) Bio-surveillance of viruses of public health importance in collaboration with other programs.
- (vii) Develop diagnostic kits for disease detection in humans and animals.
- (viii) Engage in rapid response activities to mitigate human disease outbreaks.
- (ix) Promote epigenomics and genomics to study genes factors that encode and are responsible for human viral infection, evade the immune system, or establish a chronic infection.
- (x) Conduct research on structural virology with a focus on understanding the function and sensitivity of viral proteins to host antibodies.
- (xi) Use non-human primates and other animal models to characterize Immunological responses to emerging and re-emerging viruses.
- (xii) Undertake research on use of viruses as drug delivery system vehicles for genetic diseases.
- (xiii) Study the mechanism of virus replication, the role of immune hosts and host factors in the regulating of viral infection with an aim of developing antivirals.

2) Microbial, Parasitic and Vector Pathobiology

The Section is responsible for undertaking research in basic, preclinical and translational research on microbial and parasitic pathogens and disease vectors using non-human primates and other experimental models, with the aim of understanding the pathogenesis, disease transmission and developing interventions for prevention, control and management of the resultant diseases f.

The Specific functions of the Section entail:

- (i) Conduct studies of neglected, emerging and re-emerging infectious diseases including but not limited to leishmaniasis, schistosomiasis and malaria..
- (ii) Develop non-human primate and other experimental models for human bacterial, parasitic and fungal diseases for basic, preclinical and translational research.
- (iii) Conduct co-infection studies involving two or more micro-organisms in disease models to investigate pathogen interactions, immunological responses, pathogenicity and disease outcomes.
- (iv) Conduct surveillance studies on infections, including bacterial, fungal, mycological and parasitic infections of public health importance.
- (v) Investigate pathogen biology, host-pathogen interactions and mechanisms of microbial and parasitic infection and pathogenesis
- (vi) Study vector behaviour and genomics, transcriptomics, functional genetics as proof of concept for vector control, disease transmission and interventions;
- (vii) Promote studies on the distribution, abundance, population dynamics and resistance of vector and disease pathogens to the current control and intervention strategies;
- (viii) Rear and maintain vectors for research purposes, including studies of vector biology, pathogen transmission and vector competence;
- (ix) Develop of tools for monitoring and evaluation of disease transmission;
- (x) Develop and evaluate vector-based interventions, including repellents and other appropriate approaches for prevention and control of vector-borne diseases.

3) *Vaccines, Immunobiology, and Immunotherapeutics Section*

The section is responsible for undertaking basic, preclinical and translational research in vaccine science, immunobiology, and immunotherapeutics using non-human primates and other experimental animals, to understanding immune responses, mechanisms of protection and immunopathogenesis, and to translate these findings into vaccines, immunotherapeutics and other medical countermeasures against

diseases of public health interest. The section will also provide specialized training and capacity building in immunological techniques.

Specific functions of the Section entail:

- (i) Develop and characterize non-human primate and other experimental models for basic and translation immunobiology, vaccine and immunotherapeutic research.
- (ii) Investigate innate and adoptive immune responses to infectious diseases, including B and T cell development, activation, differentiation, memory and effector functions.
- (iii) Investigate mechanisms of immune recognition, including antigen presentation, major histocompatibility complex (MHC) biology, immune-cell interactions and antigen-specific immune responses.
- (iv) Investigate immunopathogenesis and mechanisms of immune-mediated disease, including immune dysregulation associated with acute, chronic and persistent infections.
- (v) Conduct immunometabolism research, including the influence of cellular metabolic pathways and metabolites on immune-cell development, differentiation and effector functions in health and disease.
- (vi) Conduct vaccine research and development, including antigen discovery and evaluation, vaccine immunogenicity, immune correlates of protection, vaccine efficacy and optimization of vaccine platforms.
- (vii) Conduct research on immunotherapeutics and host-directed interventions, including the evaluation of immune-based approaches for prevention and treatment of infectious diseases.
- (viii) Provide specialized training and capacity building in immunological and immunotechnology techniques, including appropriate laboratory, cellular, molecular and analytical approaches for characterization of immune responses.
- (ix) Provide technical expertise and support to other KIPRE research sections requiring immunological characterization, including infectious diseases, One Health, NCDs, reproductive health and other sections.
- (x) Support multidisciplinary host–pathogen research across the Division through integration of immunology with pathogen biology, genomics, pathology, experimental models and translational research.

c) Staffing

In order to perform the above functions, the Infectious Diseases Division will be staffed as shown in Table below.

Table 7: Establishment for the Infectious Diseases Division

Designation	Grade KIP	Approved Establishment	In post	Proposed	Justification
Infectious Diseases Division					
Deputy Director, Infectious Diseases	3	1	0	1	To head the division

3.5.2 One Health and Global Health Security Division

a) Rationale

The One Health and Global Health Security Division is established pursuant to Clause 5(a-c) and (f-k) of Legal Notice No. 273 of 2017 to coordinate multidisciplinary research, surveillance, innovation and capacity development addressing health threats at the human-animal-environment interface. The Division shall integrate field and laboratory research, pathogen genomics, bioinformatics, digital technologies and community knowledge to address priority pathogens, zoonotic threats, antimicrobial resistance and climate-sensitive health threats while strengthening early warning, preparedness, response and evidence-informed policy at national, regional and global levels. The Division supports the Digital Health Act, 2023; Kenya Climate Change and Health Strategy, 2023-2027; KNPHI Strategic Plan, 2023-2027; National Action Plan for Health Security, 2026-2030; and the priorities reaffirmed at the Kenya Health Summit 2026. Regionally, it aligns with the African Union's Agenda 2063, adopted in 2015, and the Africa CDC Strategic Plan, 2023-2027, while supporting Kenya's government-to-government health cooperation. Globally, it is consistent with the Quadripartite One Health Joint Plan of Action, 2022-2029; WHO Global Genomic Surveillance Strategy, 2022-2032; and WHO Operational Framework for Building Climate-Resilient and Low-Carbon Health Systems, 2023.

c) Functions

The functions of the Division shall be to:

- I. Formulate, implement and review policies, strategies, standards and guidelines relating to One Health and global health security;
- II. Coordinate multidisciplinary research on priority pathogens, zoonotic threats, antimicrobial resistance and climate-sensitive health threats at the human-animal-environment interface;
- III. Coordinate integrated surveillance, early warning, risk assessment and preparedness for biological events of public-health importance;

- IV. Support outbreak investigation and response in collaboration with relevant government agencies and partners;
 - V. Apply pathogen genomics, disease epidemiology, modelling and digital technologies to One Health research and decision-making;
 - VI. Undertake antimicrobial-resistance and bacteriophage research for evidence-based risk reduction and management;
 - VII. Develop and evaluate surveillance, diagnostic and decision-support tools for priority pathogen threats;
 - VIII. Establish and manage research databases, biorepositories, integrated data platforms and relevant laboratory services;
 - IX. Coordinate research on climate, environmental conditions, pathogen dynamics and vector-associated health risks;
 - X. Develop appropriate experimental models for investigating pathogen dynamics, host responses and intervention strategies;
 - XI. Build multidisciplinary capacity and promote community engagement, risk communication and knowledge translation;
 - XII. Strengthen national, regional and international partnerships and mobilize resources for One Health and global health-security programmes; and
 - XIII. Disseminate research findings through scientific publications, policy briefs, reports and professional forums.
- 1) Zoonotic, Biosurveillance & Disease Ecology Section**

a) Rationale

The Section shall undertake integrated surveillance, risk assessment and preparedness for emerging and re-emerging pathogens, zoonotic threats and other biological events of public-health importance. It shall support the early detection of and coordinated response to priority viral, bacterial, fungal and parasitic pathogens, including Ebola virus, Marburg virus and other pathogens with epidemic or pandemic potential. Its mandate aligns with Kenya's National Action Plan for Health Security, 2026-2030; the Africa CDC Strategic Plan, 2023-2027; the WHO Global Genomic Surveillance Strategy, 2022-2032; and relevant CDC global health-security frameworks.

b) Functions

The functions of the Section shall be to:

- I. Assist in developing and reviewing policies, strategies, guidelines and preparedness plans for pathogen surveillance and global health security;

- II. Conduct integrated One Health surveillance of priority pathogens across humans, livestock, wildlife, vectors, wastewater and other environmental sources;
- III. Investigate pathogen occurrence, distribution, host range, transmission pathways and associated risk factors;
- IV. Establish early-warning systems using event-based, indicator-based, sentinel, wastewater and laboratory surveillance;
- V. Undertake field and laboratory investigations, risk assessments and data analysis for outbreaks and unusual health events;
- VI. Develop and evaluate surveillance and diagnostic tools for rapid pathogen detection and characterization;
- VII. Support preparedness assessments, simulation exercises, workforce training, risk communication and incident response; and
- VIII. Strengthen information sharing and collaboration with national, regional and international health-security partners.

2) Climate and Health Security Section

a) Rationale

The Section shall investigate how climate variability, environmental conditions, microbiomes, vectors and hosts influence pathogen dynamics and health risks. Its work shall support prediction, preparedness and climate-resilient One Health action in line with the Kenya Climate Change and Health Strategy, 2023-2027, and the WHO Operational Framework for Building Climate-Resilient and Low-Carbon Health Systems, 2023.

b) Functions

The functions of the Section shall be to:

- I. Assist in the formulation, implementation and review of policies, strategies and guidelines relating to climate and health;
- II. Investigate the effects of climate variability, extreme weather, land-use change and environmental conditions on pathogen and vector patterns;
- III. Conduct surveillance of climate-sensitive, vector-borne, water-associated and food-associated pathogen threats;
- IV. Study vector distribution, population dynamics, competence and host-vector-pathogen interactions;
- V. Apply genomic, geospatial and modelling approaches to characterize and predict climate-associated health risks;

- VI. Investigate relationships among climate, environmental conditions, microbiomes and susceptibility to pathogen threats;
- VII. Develop risk maps, forecasting tools and evidence-informed approaches for preparedness and risk reduction;
- VIII. Build stakeholder capacity for climate-related health surveillance and response; and
- IX. Collaborate with relevant national and international institutions on climate-informed One Health programmes.

3) Pathogen Genomics and Digital Health Section

a) Rationale

The Section shall apply genomics, bioinformatics, data driven evidence and digital technologies to One Health surveillance, early warning, preparedness and public health decision-making. It shall provide a cross-cutting platform for the secure, interoperable and responsible use of genomic, laboratory, epidemiological, climate and health data, aligned with Kenya's Digital Health Act, 2023; the WHO Global Genomic Surveillance Strategy, 2022–2032; and the Africa CDC Strategic Plan, 2023–2027.

b) Functions

The functions of the Section shall be to:

- I. Assist in developing and reviewing policies, standards and guidelines for pathogen genomics, bioinformatics, digital health and data governance;
- II. Provide pathogen genomic sequencing platforms, computational analysis and data-management support;
- III. Undertake genomic and metagenomic surveillance of priority pathogens, microbial communities and antimicrobial-resistance determinants;
- IV. Develop and maintain validated analytical pipelines for pathogen characterization, molecular epidemiology and transmission analysis;
- V. Integrate pathogen genomic, laboratory, epidemiological, climate and geospatial data through secure and interoperable platforms;
- VI. Develop dashboards, mapping systems and analytical tools for early warning, forecasting and decision support;
- VII. Promote data quality, cybersecurity, ethical data use, responsible sharing and equitable access to genomic and digital technologies;
- VIII. Build institutional capacity and partnerships in pathogen genomics and digital health.

a) Staffing

In order to perform the above functions, the One Health Division and Global Health Security will be staffed as follows.

Table 6: Establishment for One Health and Global Health Security Division

Designation	Grade KIP	Approved Establishment	In post	Proposed	Justification

Reproductive Health and Biology Division

a) Rationale

The division is responsible for undertaking research in reproductive health and biology to improve reproductive health.

b) Functions:

The Division is responsible for the following key functions: -

- (i) Support basic, pre-clinical, translational research in reproductive health and biology using non-human primates (NHPs) and other experimental animals;
- (ii) Coordinate the development and characterization of both non-human primate and other experimental animal models for priority reproductive health diseases in Kenya;
- (iii) Support assisted reproductive technology programs
- (iv) Coordinate provision of endocrinology services
- (v) Support the development of strategies for the management of the reproductive health research programs, knowledge generation and capacity building programs;
- (vi) Supervise surveillance of reproductive disease in Kenya to obtain data on the current trends of reproductive diseases and current intervention strategies;
- (vii) Support the provision of research data on reproductive health to inform policy;
- (viii) Guide in the development of capacity building in the area of reproductive health and biology;
- (ix) Oversee research fundraising activities; and
- (x) Support dissemination of scientific findings through publications, conferences, seminars and workshops.
- (xi) Supervise epidemiological studies on sexually transmitted infections including drug resistance microbes such as gonorrhoea.

The Reproductive Health & Biology Division will be organized into four (4) Sections namely:

- (i) Reproductive diseases and disorders;
- (ii) Contraception and family planning;
- (iii) Assisted reproductive technologies; and
- (iv) Microbicides and Sexually Transmitted Infections.

The functions and staffing of the sections are as provided below.

1) *Reproductive Diseases and Disorders Section*

The section is charged with carrying out research in Reproductive disease and disorders to improve reproductive health and reduce disease burden.

Specific functions of the section entails:

- (i) Spearhead through basic and translational research the understanding of normal and abnormal reproduction
- (ii) Conduct epidemiological survey of reproductive diseases and disorders in Kenya
- (iii) Conduct research on cellular and molecular aspects of gamete biology (spermatogenesis; sperm motility; fertilization), implantation, embryo development and placental function, and epigenetics.
- (iv) Establish innovative treatments for reproductive diseases and disorders
- (v) Determine the role of immunity in reproduction.
- (vi) Establish the influence of sex steroids on sexual and reproductive function, bone mineral density and muscle strength
- (vii) Study of psychological factors in reproductive failure, the menopause and the premenstrual syndrome.
- (viii) Perform functional studies of the endometrium including fetal interactions
- (ix) Determine changes in gene and protein expression throughout the menstrual cycle by doing gene micro array analysis and proteomic approach.
- (x) Map factors that could be of importance for recurrent pregnancy loss.
- (xi) Establish associations between ovarian hormones and gynaecological cancers
- (xii) Undertake research on metabolic disorders associated reproductive system

2) *Contraception and Family Planning Section*

The section is responsible for undertaking research in contraception and family planning to develop modern birth control methods and strengthen family planning programs.

Specific functions of the section entails:

- (i) Promote contraception by producing evidence-based guidelines on safety and service delivery of contraceptive methods

- (ii) Develop animal models for conducting contraceptive research
- (iii) Conduct research on safety and efficacy on novel compounds with contraceptive potentials
- (iv) Perform community activities to promote the family planning programmes as well as educate the community about specific contraceptive methods
- (v) Assess family planning needs, preferences and behaviors to inform innovation in contraceptive technologies and services
- (vi) Investigate the influence of hormonal contraceptives on peripheral vascular function and structure in premenopausal women
- (vii) Support informed choice in the use of contraceptives to improve health and well being
- (viii) Establish association of maternal use of oral contraceptives and risks of birth defects
- (ix) Promote need for contraceptives and the role of men in family planning programs
- (x) Empower women and girls to take charge of their own reproductive health, enable them to make informed decisions about family planning, and ensure their access to contraceptive options that meet their needs.
- (xi) Promote and maintain the health of individuals by providing patients with counselling and education in family planning methods and related health problems such as sexually transmitted infections, vaginal infections, diet, preventative health measures and normal growth and development.
- (xii) Participate in community education programs and reproductive health outreach activities

3) *Assisted Reproductive Technologies Section*

The section is charged with undertaking research in assisted reproductive technologies to address infertility and stigma among populations.

Specific functions of the section entails:

- (i) Undertake research in In vitro fertilization to assist in solving infertility disorders
- (ii) Promote stem cell research that will allow creation of eggs and sperm cells in humans using the baboon model.
- (iii) Focus on various causes and treatment of infertility including anatomy and physiology of the reproductive system
- (iv) Promote the establishment of the infrastructure needed for the conduct of clinical and translational research.
- (v) Study the development and maturation of germ cells, their functional interactions in the genital tract

- (vi) Perform the functional diversity of cells belonging to the reproductive system
- (vii) Epigenetic regulation and assisted reproductive technologies.
- (viii) Develop diagnostic kits for hormonal analysis and provide endocrinological services
- (ix) Undertake research on ovarian and endometrial functions during hormonal contraception.
- (x) Focus on the hormonal regulation of reproductive processes.

4) *Microbicides and Sexually Transmitted Infections Section*

The section will undertake research in microbicides and sexually transmitted infections to address sexual health issues in women by empowering them through provision of products that do not require consent from their partners. It is responsible for the following functions:

- (i) Promote prevention and treatment of sexually transmitted infections (STIs) including HIV
- (ii) Undertake surveillance of drug resistance microbes causing STIs
- (iii) Develop microbicides for prevention of STIs Including HIV
- (iv) Conduct continuous medical education on STI prevention measures
- (v) Develop animal diseases models for further biomedical research and possible treatment options
- (vi) Promote uptake, testing and development of alternative vaccines for preventing cervical cancer
- (vii) Promote development of prebiotics and probiotics and assess the role of microbiome dysbiosis in STI risk acquisition.
- (viii) Assess reproductive tract inflammatory activation by bacterial metabolites
- (ix) Stratification of pregnancy outcome and preterm birth risk using microbial profiling
- (x) Characterize the maternal immune-microbiome interactions
- (xi) Focus on microbial-host interactions on reproductive health including miscarriage, ectopic pregnancy and cervical cancer.
- (xii) Promote sex education, prevention and management of STIs

c) *Staffing*

In order to perform the above functions, the Reproductive Health & Biology Division will be staffed as shown in Tables below.

Table 8: Establishment for the Reproductive Health & Biology Division

3.5.3 Kenya Snakebite Research and Intervention Division

a) Rationale

The division draws its mandate from the Sections 5 (h) of Legal Notice No. 273 of 2017 (ST&I Act, No. 28 of 2013) and is charged with undertaking research in snakebite interventions, antivenom development and maintaining a national database on the distribution of snakes of medical importance.

b) Functions

The division is responsible for the following key functions: -

- (i) Supervise the generation of sub-national and national data and statistics on snakebite trends, patterns and distribution to guide decision making processes;
- (ii) Guide on the assessment of socioeconomic burden of snakebite at the community and health facility level to enable appropriate allocation of resources;
- (iii) Implement interventions aimed at ensuring timely access to antivenom and treatment, and improving skills of health care workers on snakebite management;
- (iv) Facilitate snakebite advocacy and social mobilization activities including behavioral change components;
- (v) Oversee preclinical efficacy and safety tests of new antivenoms and those available in the market, and other biologics such as tetanus and rabies vaccines;
- (vi) Oversee venom research by characterizing and profiling venom components of medically important snakes for preclinical efficacy testing and quality control of antivenoms, antivenom development and production;
- (vii) Supervise pre-clinical trials and research on the efficacy and safety of antivenoms and other therapeutics against snakebite envenoming;
- (viii) Oversee maintenance of national database on the distribution of medically important snakes in Kenya and their genetic composition;
- (ix) Enhance the understanding on snakebite pathophysiology and pathology by conducting clinical studies on snakebite patients;
- (x) Guide development of protocols on clinical trials of new antivenoms;
- (xi) Provide information to improve diagnosis, treatment and management of snakebite envenomation;

The Kenya Snakebite Research and Intervention Division will be organized into three (3) sections namely:

- (i) Antivenom (Biologics) Quality Control, Development and Production;
- (ii) Snakebite Epidemiology, Public Health, and Community Engagement; and
- (iii) Snakebite Clinical Sciences.

The functions and staffing of the sections are as provided below.

1) Antivenom (Biologics) Quality Control, Development and Production Section

The section is established to undertake research in antivenom development, characterization and quality control. Specific functions of the section entails:

- (i) Conduct preclinical efficacy and safety tests of new antivenoms and those available in the market, and other biologics;
- (ii) Conduct venom research by characterizing and profiling venom components of medically important snakes for preclinical efficacy testing and quality control of antivenoms, antivenom development and production;
- (iii) Conduct basic, preclinical and clinical research geared towards the development of effective, safe and affordable antivenoms and other therapeutics against medically important snakes of Kenya, and the East African region;
- (iv) Conduct pre-clinical and clinical trials in collaboration with other players to determine efficacy and safety of antivenoms and other therapeutics against snakebite envenoming;
- (v) Create and maintain national database on the distribution of snakes of medical importance in Kenya and their genetic composition;
- (vi) Collaborate with other organizations in clinical trials

2) *Snakebite Epidemiology, Public Health, and Community Engagement Section*

The section is established to undertake research in snakebite interventions, maintain a national database on the distribution of snakebites & snakes of medical importance and carry out community advocacy.

Specific functions of the section entails:

- (i) Generate sub-national and national data and statistics on snakebite trends, patterns and distribution to guide decision making processes;
- (ii) Define the socioeconomic burden of snakebite at the community and health facility level to enable appropriate allocation of resources;
- (iii) Implement interventions aimed at ensuring timely access to antivenom and treatment, and improving skills of communities and health care workers on snakebite first aid, prevention, control and management;
- (iv) Engage in snakebite advocacy and social mobilization activities including behavioral change components;

3) ***Snakebite Clinical Sciences Section***

The Section is establishment pursuant to Section 5(b and h) of Legal Notice No. 273 of 2017 (ST&I Act, No. 28 of 2013) and is responsible for the following functions:

- (i) Enhance the understanding on snakebite pathophysiology and pathology by conducting clinical studies on snakebite patients;
- (ii) Develop and guide protocols on clinical trials of new antivenoms;
- (iii) Improve diagnosis, treatment and management of snakebite envenomation;
- (iv) Implement interventions aimed at ensuring timely access to antivenom and treatment, and improving skills of communities and health care workers on snakebite first aid, prevention, control and management;

c) **Staffing**

In order to perform the above functions, the Kenya Snakebite Research and Intervention Division will be staffed as shown in Tables below.

3.5.4 Non-Communicable Diseases Division

a) Rationale

The division draws its mandate from the Sections 5 (i) of Legal Notice No. 273 of 2017 (ST&I Act, No. 28 of 2013) to undertake research in non-communicable diseases using non-human primates.

b) Functions

The Division is responsible for the following key functions: -

- (i) Conduct basic, pre-clinical, translational research in non-communicable diseases for intervention and prevention strategies using non-human primates (NHPs) as models for the diseases;
- (ii) Undertake research in Neurosciences, Cancer, Genetic, Metabolic and chronic respiratory diseases, Drug discovery, development and delivery, Cardiovascular, regenerative, exercise and sports sciences;
- (iii) Develop and characterize both non-human primate and other experimental animal models for priority non-communicable diseases in Kenya;
- (iv) Support the development of strategies for the management and prevention of the non-communicable diseases research programs, knowledge generation and capacity building programs;
- (v) Conduct non-communicable disease surveillance in Kenya to obtain data on the current trends of non-communicable diseases and current intervention strategies;
- (vi) Provide research data on non-communicable disease to inform policy;
- (vii) Conduct capacity building in the area of non-communicable diseases in liaison with other Government agencies & programs;
- (viii) Participate in research fundraising activities; and
- (ix) Disseminate scientific findings through publications, conferences, seminars and workshops.

The Non-Communicable Diseases Division will be organized into four (4) Sections namely:

- (i) Neurosciences;
- (ii) Cancer, Genetic & Metabolic diseases;
- (iii) Chronic lung diseases; and
- (iv) Cardiovascular, Regenerative and Sports science.

The functions and staffing of the sections are as provided below.

1) Neurosciences Section

The Section is responsible for the following key functions: -

- (i) Conduct basic, pre-clinical, translational research in non-communicable diseases of the nervous system for intervention and prevention strategies;
- (ii) Undertake research on neurobiology, neurodegenerative diseases and related neurological disorders, mental health, Sleep, Addiction and other emerging and neglected conditions of the nervous system;
- (iii) Develop and characterize both non-human primate and other experimental animal models for diseases of the nervous system in Kenya;
- (iv) Support the development of strategies for the management and prevention of neurodegenerative diseases and related neurological disorders, mental health, addiction, sleep and other emerging and neglected conditions research programs, knowledge generation and capacity building programs;
- (v) Conduct neurodegenerative diseases and related neurological disorders, mental health, addiction, sleep and other emerging conditions surveillance in Kenya to obtain data on the current trends of the diseases and current intervention strategies;
- (vi) undertake drug discovery, development, delivery, and toxicology research to provide cost-effective alternatives for the treatment and management of NCDs and support in knowledge generation and capacity building programs;
- (vii) Provide research data on neurodegenerative diseases and related neurological disorders, mental health, sleep, addiction and other emerging and neglected conditions to inform policy;
- (viii) Conduct capacity building in neurodegenerative diseases and related neurological disorders, mental health, sleep, addiction and other emerging and neglected conditions in liaison with other Government agencies & programs;
- (ix) Participate in research fundraising activities; and
- (x) Disseminate scientific findings through publications, conferences, seminars and workshops.

2) Cancer, Genetic and Metabolic Diseases Section

The Section is responsible for the following key functions: -

- (i) Conduct basic, pre-clinical, translational research in non-communicable diseases of metabolic, hereditary etiologies and cancer for intervention and prevention strategies using non-human primates (NHPs) as models of the diseases;

- (ii) Undertake research on cancer, diabetes, physiologic, lifestyle, hereditary and other emerging conditions;
- (iii) Develop and characterize non-human primates as models of disease, and other experimental animal models for cancer, diabetes, hereditary and other emerging conditions;
- (iv) Support the development of strategies for the management and prevention of cancer, diabetes, genetic and other emerging conditions research programs, knowledge generation and capacity building programs;
- (v) Conduct cancer, diabetes, genetic and other emerging conditions surveillance in Kenya to obtain data on the current trends of the diseases and current intervention strategies;
- (vi) Provide research data on cancer, diabetes, hereditary and other emerging conditions to inform policy;
- (vii) Conduct capacity building in cancer, diabetes, hereditary and other emerging conditions in liaison with other Government agencies & programs;
- (viii) Participate in research fundraising activities; and
- (ix) Disseminate scientific findings through publications, conferences, seminars and workshops.

3) *Chronic Lung Diseases Section*

The Section is responsible for the following key functions: -

- (i) Conduct basic, pre-clinical, translational research in non-communicable chronic respiratory diseases for intervention and prevention strategies using non-human primates (NHPs) as models of the diseases;
- (ii) Undertake research on chronic obstructive pulmonary disease (COPD), genetic cystic fibrosis, bronchiectasis, asbestosis, black lung disease, pneumonitis and other emerging physiologic, lifestyle, hereditary and environmental conditions;
- (iii) Develop and characterize both non-human primate and other experimental animal models for chronic lung diseases and other emerging conditions;
- (iv) Support the development of strategies for the management and prevention of chronic lung diseases and other emerging conditions research programs, knowledge generation and capacity building programs;
- (v) Conduct chronic lung diseases and other emerging conditions surveillance in Kenya to obtain data on the current trends of the diseases and current intervention strategies;

- (vi) Provide research data on chronic lung diseases and other emerging conditions to inform policy;
- (vii) Conduct capacity building in chronic lung diseases and other emerging conditions in liaison with other Government agencies & programs;
- (viii) Participate in research fundraising activities; and
- (ix) Disseminate scientific findings through publications, conferences, seminars and workshops.

4) *Cardiovascular, Regenerative And Sports Science Section*

The Section is responsible for the following key functions: -

- (i) Conduct basic, pre-clinical, translational research in non-communicable diseases of the cardiovascular system, regenerative medicine, exercise and sports sciences for intervention and prevention strategies using non-human primates (NHPs) as models of the diseases;
- (ii) Undertake and render antidoping laboratory services
- (iii) Undertake research on cardiovascular diseases, regenerative medicine, exercise and sports sciences;
- (iv) Develop and characterize both non-human primate and other experimental animal models for cardiovascular diseases, regenerative medicine, exercise and sports sciences in Kenya;
- (v) Support the development of strategies for the management and prevention of cardiovascular diseases, regenerative medicine, exercise and sports sciences research programs, knowledge generation and capacity building programs;
- (vi) Conduct cardiovascular diseases, exercise and sports related disease conditions/injuries surveillance in Kenya to obtain data on the current trends of the diseases and current intervention strategies;
- (vii) Provide research data on cardiovascular diseases, exercise and sports related disease conditions/injuries to inform policy;
- (viii) Conduct capacity building in cardiovascular diseases, exercise and sports related disease conditions/injuries in liaison with other Government agencies & programs;
- (ix) Participate in research fundraising activities; and
- (x) Disseminate scientific findings through publications, conferences, seminars and workshops.

c) **Staffing**

In order to perform the above functions, the Non-Communicable Diseases Division will be staffed as shown in Tables below.

3.5.5 Evolutionary Ecology, Conservation & Ecosystem Health Division

a) Rationale

The division draws its mandate from the Sections 5 (f) of Legal Notice No. 273 of 2017 (ST&I Act, No. 28 of 2013) to undertake studies in non-human primate conservation biology and primatology.

b) Function

The division is responsible for the following key functions: -

- (i) Undertake field research on primatology and wildlife ecology with focus on species behavioral ecology (Nutrition, Sociobiology & endocrinology), evolution, conservation and management;
- (ii) Undertake baseline surveys on non-human primates and other biodiversity for the purpose of documentation as well as monitoring & evaluation of efficacy of our conservation strategies;
- (iii) Establish and maintain a national non-human primate database on their diversity (taxonomy), population status, and geo-spatial distribution for effective prioritization of research, conservation and management;
- (iv) Undertake in-situ health monitoring of primate populations and other wildlife and support the zoonosis surveillance activities for purposes of developing early warning systems and preparedness to respond to potential disease outbreaks and threats to endemic and critically endangered primate and other species;
- (v) Play national advisory role on matters of primate conservation & management including mitigation of human-nonhuman primate conflicts or interaction threats;
- (vi) Monitor the impacts of climate change on biodiversity (including primates and other species) and local communities and develop and implement sustainable conservation initiatives or climate actions to promote climate change response in terms of mitigation, adaptation and resilience;
- (vii) Undertake research and monitoring of human-nonhuman primates-wildlife interactions and associated impacts to local communities and species themselves to promote informed risks mitigation, minimize socio-economic losses (from crop raiding, livestock depredation, and loss of life) and potential risk of zoonotic diseases;
- (viii) Collaborate with the KIPRE's directorate of Animal science, Welfare and Ethics on translocation and zoonotic sampling/surveillance studies involving animal capture, invasive sample collection, or translocation for purpose of research or populations or species conservation and management

- (ix) Offer behavioral expertise to biomedical programs undertaking captive behavioral monitoring or for captive behavioral welfare advice under the directorate of Animal Sciences, Welfare and Ethics in effort to support institutional compliance with animal welfare and ethical guidelines in captivity.
- (x) Provide technical advice based on in-situ behavioral studies and monitoring of primates on ideal enrichment requirements as well as wise and ethical use of problem animals for research to improve human health;
- (xi) Enhance training and capacity building in the field of primatology and biodiversity, support community pro-conservation alternative livelihoods and conduct outreach programs on environment, primate conservation education, biodiversity and climate change;
- (xii) Provide guidance and institutional support in establishment and management of field site research stations to support both Sectional and institutional field research on conservation and zoonosis agenda;
- (xiii) Undertake anthropological (including ethno-primatology and ethnobotany) studies that inform primates and other wildlife conservation, ecosystem health and public health;
- (xiv) Disseminate scientific findings through publications, conferences, seminars and workshops.

The Evolutionary Ecology, Conservation & Ecosystem Health Division will be organized into four (4) Sections namely:

- (i) Populations & Community Ecology Section;
- (ii) Behavioral & Applied Ecology Section
- (iii) Climate Change, Biodiversity & Ecosystem Health Section
- (iv) Anthropology & Conservation Section

The functions and staffing of the sections are as provided below.

1) *Populations and Community Ecology Section*

The Section is established to undertake national primate census, geo-spatial distribution mapping and maintaining a national database of the country's primate biodiversity in addition to primate studies for the purpose of their conservation and zoonotic diseases surveillance and monitoring.

The section is responsible for the following functions:

- (i) Undertake national primate population census and geospatial mapping of the species distribution and associated zoonotic infections and develop a national primate database.
- (ii) Conduct routine primate populations monitoring for the purpose of developing and reviewing the national red-listing of Kenyan primates and share with relevant stakeholders for action prioritization and strengthening of primate conservation.
- (iii) Undertake primate and other wildlife species and population genomics to inform accurate taxonomy, distribution, species dispersal, inbreeding depression and population bottlenecks to enhance their research and conservation.
- (iv) Carry out primates and other wildlife habitat suitability analysis surveys to enhance their protection and long-term survival.
- (v) Undertake primate studies to describe their biological characterization for purposes of effective conservation and research.
- (vi) Undertake ecological risk assessments and species threat reduction studies to ensure survival of the Kenya's most threatened and endemic species
- (vii) Monitor primate habitat threats (including invasive species) and develop mitigation management plans
- (viii) Undertake restoration ecology for sustainable conservation and management of primates and wildlife habitats
- (ix) Undertake landscape ecology to understand the drivers of spatial-temporal distribution patterns of primates and other wildlife and the home range conservation requirements.
- (x) Undertake demographics monitoring of habituated groups of primates and other prioritized wildlife species to understand drivers of population dynamics, carry out population viability analysis and understand population and environmental stochasticity.
- (xi) Carry out phenological studies to understand food resource dynamics in critical primate habitats.
- (xii) Promote national and global capacity building in the field of primatology through running field-schools, short course trainings and mentorship of young primatologists.
- (xiii) Undertake outreach programs in schools and to the general public through visits, media, education materials and public lectures or talks to raise awareness on primates, biodiversity & climate change.

2) ***Behavioral & Applied Ecology Section***

The section is responsible for carrying out primatological studies to inform science and conservation of nonhuman primates as well as other wildlife species.

The functions of the section entails:

- (i) Conduct in-situ studies on general primates behavior to inform their evolutionary biology, ecology and establish baselines for understanding behavioral changes driven by health changes or disease manifestation in both captivity and in-situ.
- (ii) Carry out research on intra and interspecific species interactions to inform primate sociobiology and multi-species associations.
- (iii) Undertake research on species-environmental interactions to understand behavioral plasticity and adaptations to variable ecological conditions.
- (iv) Undertake research on mother-infant behavioral interactions to inform primates life histories and its key drivers as fundamental topics in understanding life-term or developmental health implications.
- (v) Undertake nutrition ecology of primates and other wildlife to inform their foraging strategies, dietary, anatomical adaptations and their reproductive fitness for conservation implications and drawing population health inferences.
- (vi) Carry out behavioral endocrinology studies to understand coping mechanisms of primate species or populations amid anthropogenic and natural stressors.
- (vii) Generated behavioral data to test debatable evolutionary theories such as primate Socio-ecology theory, Expansive Tissue Hypothesis, Ecological Risk Aversion Hypothesis, and Primate extended juvenile dependency, which are of social and health significance.
- (viii) Carry out behavioral surveys that inform crop raiding and depredation by primates as a socio-economic problem and key driver of conservation and zoonotic disease risks.
- (ix) Undertake ecological studies of other sympatric and threatened species that are critical for survival of primate species or are in imminent danger of extinction in primate ranges.
- (x) Establish a database of detailed ecological characterization of the country primates for purposes of enhancing awareness and informing decisions on their management and protection.
- (xi) Collect, analyze and publish information on primate ecology for purposes of scientific contributions and supporting health studies.

3) *Climate Change, Biodiversity and Ecosystem Health Section*

The section is charged with the following functions:

- (i) Undertake research and monitoring of climate change research and impacts on biodiversity and local livelihoods to promote response to climate change
- (ii) Work with local communities and other conservation stakeholders to identify and implement effective climate change actions to promote mitigation, adaptation and resilience of people and biodiversity to climate change
- (iii) Regenerate information on climate change impacts to guide institutional and legal framework in effort towards climate change response.
- (iv) Undertake biodiversity surveys and monitoring in unexplored and perceived biodiversity hotspot regions in the country to contribute to national biodiversity database and biodiversity action plan
- (v) Promote primate and other biodiversity conservation through species restoration both ex-situ and in-situ.
- (vi) Mainstream gender and vulnerable groups in climate change action to enhance biodiversity conservation.
- (vii) Support endangered species conservation and recovery efforts through development and implementation of effective national action plans of targeted species
- (viii) Undertake studies on climate change and land use changes to understand mechanisms of biodiversity distribution, extinctions, and zoonotic infections and transmission.
- (ix) Carry out ecological monitoring in various ecosystems especially on environmental epidemiology and exposure and associated impacts.
- (x) Carry out surveys to establish the effects of ecosystem deteriorations on biodiversity, disease risks, and overall human & wildlife health and sustainability.
- (xi) Undertake habitat restoration activities for resilience of ecosystem health.

4) *Anthropology and Conservation Section*

The section is charged with the following functions:

- (i) Monitor human-non-human primates and other forms of human wildlife conflicts and recommend appropriate interventions
- (ii) Respond to human-non-human primate conflicts crisis especially where co-existence is no longer feasible primate's translocations remains as the last options in saving the species and resolving the conflict

- (iii) In partnership communities and other stakeholders develop compensation or reward mechanisms to enhance human-non-human primate & others wildlife coexistence
- (iv) Undertake research on human-wildlife interactions (including primates), interfaces of interactions and potential health or disease risks and develop appropriate mitigations measures for both human and species protection
- (v) Undertake both ethno-primatological and ethno-botanical studies to promote sustainable conservation of species and their habitats.
- (vi) Monitor the ecosystem quality and undertake research on medical anthropology to ensure healthy coexistence of biodiversity and humans
- (vii) Carry out studies on primates and other wildlife microbiome to understand risks and benefits of poly-specific associations for conservation strategies and understanding of ecosystem health
- (viii) Undertake studies on conservation, medical and ecological anthropology
- (ix) Educate and engage local communities in sustainable conservation of primates, biodiversity and natural resources for benefits of the present and future generations
- (x) Sensitize the local communities and general public on the threats driving primates and other biodiversity to extinction and mobilize the community-led actions for mitigation
- (xi) Identify and build capacity of the local community skill gaps in supporting locally-driven conservation and research initiatives that promote primates and biodiversity conservation
- (xii) Develop local resources centres in primate hotspots and support communities in establishing nature based enterprises aimed at minimizing threats to primates and biodiversity and building climate change resilience.

c) Staffing

In order to perform the above functions, the Non-Communicable Diseases Division will be staffed as shown in Tables below.

Table 11: Establishment for the Evolutionary Ecology, Conservation & Ecosystem Health Division

3.5.6 Laboratory Services Section

a) Rationale

The section is responsible for overall coordination of all research laboratories and oversight of biosafety and biosecurity, health and safety, sample management and biobanking to ensure quality of research outputs.

b) Functions

The section is charged with the following functions:

- (i) Maintain and updates general and specific laboratory rules, regulations, trainings, documents, manuals, procedures and work instructions;
- (ii) Maintain laboratory equipment inventory and performance by establishing quality standards; developing operations, quality, and troubleshooting procedures; ensuring personnel compliance; certifying instrument performance; arranging equipment replacement, service, and repair
- (iii) Maintain laboratory supplies and reagents inventory by checking stock to determine inventory level; anticipating needed supplies; placing and expediting orders for supplies; verifying receipt of supplies.
- (iv) Quality results by participating in the related quality assurance program; consulting with pathologists, Research Scientists, Clinical Research Scientists and Technicians; performing proficiency surveys; reviewing quality control and quality assurance programs; making adjustments in policy and procedures; generating reports; maintaining record

- (v) Implement new programs, tests, methods, instrumentation, and procedures by investigating alternatives; preparing proposals; developing
- (vi) Maintain laboratory personnel, including interns and support personnel, by recruiting, selecting, orienting, and training them and performing parallel testing; monitoring progress.
- (vii) Coordinate and maintains a good relationship with local and international suppliers and distributors of all laboratory facilities, equipment, supplies and reagents .
- (viii) Maintain professional and technical knowledge by attending educational workshops; reviewing professional publications; establishing personal networks; participating in professional societies
- (ix) Design and develop the necessary infrastructure needed for Biobanking.
- (x) Develop protocols on material access control and accountability measures,
- (xi) Develop and implement biobanking creation and access policy.
- (xii) Biobanking of tissues and cells for assisted reproductive techniques.
- (xiii) Cryopreservation of to preserve the genetic diversity of animals and to support the breeding program at the Kenya Institute of Primate Research
- (xiv) Develop and write sample repository procedures on reception, accessioning, bio-banking and curating samples for long-term consolidated storage with enhanced material control, security and accountability in both archival and retrieval.
- (xv) Identify and collect blood and tissue from laboratory animals.
- (xvi) Process and preserve blood and tissue from laboratory animals for biobanking.
- (xvii) Collect and preserve eggs, sperms, and superior germplasm for improving animal productivity;
- (xviii) Collect and preserve eggs, sperms, and embryos of endangered species of NHPs and other animals;
- (xix) Continuously update the biobank database and cataloging of serum and tissue in biobank.
- (xx) Develop and provide ethical governance including legitimacy of source of samples.

c) Staffing

In order to perform the above functions, the Laboratory Services will be staffed as shown in Tables below.

Table 12: Staff Establishment - Laboratory Services Section

Designation	Grade KIP	In post	Proposed Establishment	Justification
Assistant Director, Laboratory Services	4	0	1	To head the Section
Principal Laboratory Technologist	5	0	1	
Senior Laboratory Technologist	6	1	1	
Laboratory Technologist I	7	0	1	
Laboratory Technologist III/II	9/8	0	2	
Engineering Technologist III/II	9/8	0	1	
Laboratory Technician II/I	10/9	1	2	
TOTAL	2	9	9	

5.6 Directorate of Animal Sciences, Welfare & Ethics

a) Rationale

The directorate is established to provide quality animals and diagnostic and pathology services to scientists performing animal-based research on toxicology, reproduction, non-communicable diseases, and other infectious diseases in the organization as well as for the industry. In addition, the directorate also ensures overall coordination of all laboratories and oversight of biosafety and biosecurity, health and safety, sample management and biobanking.

b) Functions

The Directorate is responsible for the following key functions: -

1. Develop and implement policies, guidelines and systems for comprehensive veterinary care of laboratory animals and animals under the National Laboratory Animal Breeding Programme, including clinical care, diagnostics, surgery, pathology, preventive medicine and quarantine services.
2. Ensure compliance with national and international standards for laboratory animal care and use, including statutory veterinary requirements, accreditation standards such as KVB, AAALAC, OLAW requirements, and other applicable international guidelines.
3. Oversee the health, welfare and management of laboratory animals, including routine health monitoring, disease prevention and control, enrichment, behavioral

management, and humane care and use of non-human primates and other experimental animals.

4. Oversee the National Laboratory Animal Breeding Programme for non-human primates, rodents and other laboratory animals, including breeding strategies, colony management, genetic quality, health monitoring, and establishment of standardized breeding conditions.
5. Oversee the design, development, maintenance and operation of animal facilities and associated infrastructure to ensure compliance with international standards for laboratory animal care, welfare, biosafety and biosecurity.
6. Oversee and support collaborative, contract and independent research involving laboratory animal health, diseases, welfare, enrichment, behavior, breeding and other aspects of laboratory animal science under captive conditions.
7. Provide technical support for national regulatory and inspection services for laboratory animal facilities, in collaboration with the Kenya Veterinary Board and other relevant regulatory and professional bodies.
8. Develop and maintain institutional laboratory animal care systems, procedures and documentation, including rules, regulations, SOPs, manuals, work instructions, training materials and other quality management documents.
9. Coordinate quality assurance and quality control systems for veterinary and laboratory services, including proficiency testing, quality assessments, performance monitoring, record management, reporting, and continuous improvement of policies and procedures.
10. Oversee laboratory equipment, supplies and critical resources by maintaining inventories, establishing quality and performance standards, coordinating servicing and calibration, and ensuring availability of essential supplies, reagents and equipment.
11. Develop and implement systems for biobanking and management of biological specimens, including the design of appropriate infrastructure and development of policies governing the collection, storage, quality assurance, access, use and disposal of biological materials.
12. Oversee institutional biorisk management, biosafety and biosecurity, including risk assessment, safe handling and containment of biological materials, emergency preparedness and response, staff training, compliance monitoring, incident investigation and corrective action.
13. Coordinate and provide veterinary and technical support for the capture, translocation, rehabilitation and management of non-human primates, in collaboration with field primatologists, Kenya Wildlife Service and other relevant stakeholders, for conservation, research, management and establishment of breeding colonies.

14. Oversee toxicology research and services, including the evaluation of the safety and biological effects of drugs, chemicals, toxins and other test substances using appropriate laboratory and animal models in accordance with regulatory, ethical and quality standards.

c) Staff Establishment

The Directorate of Animal Sciences, Welfare & Ethics will be staffed as follows: -

Table 14: Establishment for Director, Animal Sciences, Welfare & Ethics

Designation	Grade KIP	Approved	In post	Proposed Establishment	Justification
Director , Animal Sciences, Welfare & Ethics	2	1	0	1	
Office Administrator II/I	8/7	1	0	1	
Total		2	0	2	

The Animal Sciences, Welfare and Ethics Directorate will be organized into two (4) divisions namely: -

- (i) Animal Health, Welfare and Ethics Division
- (ii) National Experimental Animal Breeding Division
- (iii) Laboratory and biorisk management services Division
- (iv) Toxicology Division

5.6.1 Animal Health Welfare and Ethics Division

a) Rationale

The Division is established to provide integrated oversight of animal health, veterinary care, welfare and ethical use across the Institute. It will ensure that animals used in research and maintained within the facility are managed in accordance with scientific, ethical, animal welfare and regulatory standards.

b) Functions

The Division is responsible for the following key functions: -

- (i) Provide and oversee comprehensive veterinary care, including preventive, clinical, emergency and disease management services for all animals maintained or used by the Institute.

- (ii) Develop, implement and monitor animal health, welfare, ethics and veterinary care policies, guidelines, standards and procedures.
- (iii) Oversee animal welfare, husbandry, housing, nutrition, environmental enrichment, pain and distress management, humane endpoints and euthanasia practices.
- (iv) Provide veterinary and ethical oversight of research involving animals and ensure compliance with approved protocols and applicable regulatory requirements.
- (v) Coordinate animal health programmes, including quarantine, disease surveillance, health monitoring, biosecurity and management of animal health records.
- (vi) Conduct regular inspections, welfare assessments and compliance audits of animal facilities and ensure implementation of corrective and preventive actions.
- (vii) Provide training, technical guidance and capacity building for researchers, veterinarians, animal technicians and animal care personnel on responsible animal use, welfare and ethics.
- (viii) Coordinate the investigation, documentation and reporting of animal health, welfare and research-related incidents, including adverse events, unexpected morbidity or mortality and non-compliance.
- (ix) Oversee and support collaborative, contract and independent research involving laboratory animal health, diseases, welfare, enrichment, behaviour, breeding and other aspects of laboratory animal science under captive conditions.

The Animal Health Welfare and Ethics Division is organized into two (2) Sections namely: -

- (i) Animal Clinic and Surgery Section; and
- (ii) Animal Welfare and Ethics Section.

1) *Animal Clinic and Surgery Section*

The Section is responsible for the following key functions: -

- (i) Develop and implement policies that ensures provision of Veterinary care that includes; clinical, diagnostic, surgery and pathology, quarantine services to KIPRE Laboratory animals and the National Laboratory Animal Breeding Program.
- (ii) Provide general health monitoring, preventive health programs and Sentinel program for colony and breeding animals
- (iii) Provide quarantine services for externally sourced animals
- (iv) Train and assist Researchers in humane handling of laboratory animals, prescribing medications/and treatments, administering vaccinations to research animals
- (v) Performing euthanasia services
- (vi) Keep safe custody of regulated and restricted drugs
- (vii) Perform collaborative, independent research and structured contracted research and other services on laboratory animal science

- (viii) Provide mandatory presence of laboratory animal veterinarian in IACUC/ISERC
- (ix) Maintain and update animal health records
- (x) Ensure the section's compliance to national veterinary services statutory requirements, accreditation bodies and international guidelines e.g. Association of Assessment and Accreditation of Laboratory Animal Care (AAALAC), Office of Laboratory Animal Welfare (OLAW) etc.

2) Animal Welfare and Ethics Section

The Section is responsible for the following key functions: -

- (i) Formulate national laboratory animal welfare and ethics policies, in consultation with Director of Veterinary Services (DVS) and National Commission for Science, Technology & Innovation (NACOSTI) and other stakeholders;
- (ii) Act as custodian and implementer of all national and international guidelines for animal welfare care and use standards e.g. Kenya Veterinary Board, Association of Assessment and Accreditation of Laboratory Animal Care (aaalac international) and Office of the Laboratory Animal Welfare (OLAW)
- (iii) Train local veterinarians, scientists, and animal care personnel on animal welfare and ethics through partnerships with local and international Laboratory Animal experts.
- (iv) Provide technical support for national regulatory and inspection services for laboratory animal facilities, in collaboration with the Kenya Veterinary Board and other relevant regulatory and professional bodies.
- (v) Contribute in gazettelement and legislation of new and outstanding laws through collaboration with relevant stakeholders e.g the "National Guidelines for the care and use of animals in research and education in Kenya" (which was launched at IPR by Cabinet Secretary Prof Kaimenyi in 2013);
- (vi) Collaborate with field primatologists from center for Evolutionary Ecology, conservation & Ecosystem Health at KIPRE in mitigation of human-nonhuman primate conflicts and supporting animal welfare in the field where veterinary services is needed.

c) Staff Establishment

The Animal Welfare and Ethics Division will be staffed as follows:

Table X: Staff Establishment for the Animal Health Welfare and Ethics Division

5.6.2 National Laboratory Animal breeding, Welfare & Ethics Division (National Experimental Animal Breeding Division)

Rationale

The division draws its mandate from the Sections 5 (d) of Legal Notice No. 273 of 2017 (ST&I Act, No. 28 of 2013) which requires KIPRE to establish and operate a national breeding colony of Non-Human Primates and other experimental laboratory animals for research.

A. Functions

The Division is responsible for the following key functions: -

- (i) Develop and implement national standards and programmes for the breeding, production, acquisition, colony management and supply of experimental animals for research, training and other approved purposes.

- (ii) Oversee animal husbandry and facility operations, including housing, feeding, sanitation, cleaning, disinfection, waste management, environmental control and routine care, in accordance with established animal welfare and biosecurity standards.
- (iii) Manage and maintain healthy, genetically defined and, where applicable, Specific Pathogen Free (SPF) animal colonies, including routine health monitoring, disease prevention, quarantine and colony surveillance programmes.
- (iv) Develop and implement breeding and colony management programmes, including genetic management, reproductive management, breeding plans, colony expansion, replacement and maintenance of appropriate animal numbers and characteristics.
- (v) Establish and oversee animal behaviour, enrichment and social management programmes to promote animal wellbeing, reduce stress and support normal species-specific behaviours.
- (vi) Develop and coordinate competency-based training and capacity-building programmes for animal care personnel, researchers and other users in experimental animal husbandry, handling, welfare, behaviour, breeding and facility management.
- (vii) Plan, develop and maintain appropriate experimental animal infrastructure and support systems, including housing facilities, breeding units, quarantine areas, veterinary support areas, environmental control systems and other essential facility infrastructure.
- (viii) Maintain comprehensive animal, breeding, colony, health and facility management records and systems, and provide animals and associated husbandry support to approved research and training programmes in accordance with scientific, ethical, welfare and regulatory requirements.

The National Laboratory Animal Breeding Division is organized into (2) section namely:-

1. National Laboratory Animal Breeding Section (Non-Human Primate Colony Section)
2. National Laboratory Animal Welfare Section (Rodent Section)

1) Non-Human Primate Colony Section

The Section is responsible for the following key functions: -

- i. Develop and implement NHP breeding and colony management programmes in accordance with national requirements, institutional policies and internationally recognized standards.
- ii. Manage the production, acquisition, allocation and availability of healthy, high-quality NHPs for approved research, training and other institutional programmes.
- iii. Maintain well-characterized NHP colonies, including comprehensive records on identification, pedigree, genetics, reproductive history, health status, behaviour and colony demographics.

- iv. Implement sustainable breeding and reproductive programmes, including conventional breeding and appropriate assisted reproductive technologies to enhance colony productivity, genetic diversity and research suitability.
- v. Provide and oversee appropriate nutrition, husbandry and environmental management, including feeding, sanitation, housing, enrichment and other requirements necessary for optimal animal health, welfare and development.
- vi. Develop and maintain appropriate NHP infrastructure and housing systems that provide adequate space, social opportunities, environmental complexity and species-appropriate conditions that support physical and psychological wellbeing.
- vii. Establish and implement behavioural management programmes, including positive reinforcement training, behavioural assessment, social housing and physical and food enrichment to promote welfare and facilitate safe research procedures.
- viii. Coordinate the acquisition, capture, quarantine, translocation and integration of NHPs into research colonies, in collaboration with relevant conservation, ecological, veterinary and regulatory authorities.
- ix. Coordinate NHP health monitoring and preventive health programmes with the Animal Health, welfare and Ethics Division, and ensure that animals allocated for research meet appropriate health, nutritional and behavioural requirements.
- x. Develop and implement SOPs, quality management systems, training programmes and continuous improvement initiatives for NHP breeding, husbandry, welfare, behaviour, colony management and research support, consistent with national and international standards.

2. Rodent Section

Rationale

The Rodent Laboratory Section is established to provide standardized breeding, housing, husbandry and research support for laboratory rodents while ensuring high standards of animal welfare, biosafety, biosecurity, environmental management, regulatory compliance, training and scientific quality in accordance with national and international standards and the principles of the 3Rs.

Functions

- i. Manage breeding and rodent colonies, including breeding programmes, genetic management, colony expansion, animal identification, weaning, replacement and maintenance of appropriate colony size and characteristics.
- ii. Provide and oversee comprehensive rodent husbandry services, including feeding, watering, bedding, cage changing, cleaning, disinfection, sanitation, waste management, routine animal handling and daily health and welfare observations.

- iii. Manage rodent housing and environmental conditions by monitoring temperature, humidity, ventilation, lighting, noise, air quality, cage conditions and other environmental parameters, and implementing corrective measures where necessary.
- iv. Promote animal welfare and natural species-specific behaviour through appropriate social housing, environmental enrichment, habituation, behavioural monitoring and management of stress, aggression and abnormal behaviours.
- v. Implement rodent facility biosafety and biosecurity systems, including quarantine, health surveillance, controlled access, animal and material movement, personal protective equipment, containment, decontamination, pest control and appropriate waste management.
- vi. Provide technical and animal-related support to approved research programmes, including animal allocation, acclimatization, identification, handling, restraint, sample collection, monitoring and other approved experimental procedures.
- vii. Develop, implement and periodically review SOPs and quality management systems covering breeding, husbandry, cleaning, disinfection, environmental monitoring, animal handling, enrichment, health surveillance, quarantine, emergency procedures and other facility operations.
- viii. Develop and provide competency-based training and continuing professional development for researchers, veterinarians, animal technicians, students and other personnel involved in the care and use of laboratory rodents.
- ix. Coordinate the development, maintenance and upgrading of rodent facility infrastructure, equipment and support systems, including animal housing, breeding and quarantine areas, cage-washing and sanitation systems, environmental monitoring equipment, procedure rooms, storage and emergency systems, to support safe, efficient and high-quality research.

c) Staff establishment

The national experimental animal breeding division will be staffed as follows

Table x: Staff establishment for the national experimental animal breeding division

Designation	Grade KIP	Approved establishment	In post	Proposed Establishment	Justification
Deputy Director, national experimental animal breeding division	3	1	0	1	
Chief Clinical /Research Officer	2	1	0	1

5.6.3 Laboratory and Bio-risk Management Services Division (Justify)

Rationale

The division is established to provide integrated oversight of laboratory operations, biosafety, biosecurity, biorisk management and quality systems across the Institute, ensuring that research and diagnostic activities are conducted safely, securely and in compliance with applicable national and international standards.

Functions

- i. Develop and implement institutional policies, standards and procedures for laboratory management, biosafety, biosecurity, biorisk management and quality assurance in accordance with national and international requirements.
- ii. Coordinate the planning, allocation, utilization and maintenance of laboratory infrastructure and space, including laboratories, sample storage areas, biobanks, cold rooms, equipment rooms, hazardous material storage and other specialized facilities.
- iii. Oversee the establishment and maintenance of appropriate sample and biobanking facilities, including adequate capacity for ambient, refrigerated, frozen and other specialized storage, with appropriate inventory, traceability, access control, backup and contingency systems.
- iv. Coordinate laboratory inspections, facility assessments and compliance audits to ensure that infrastructure, equipment, environmental conditions, containment and operational practices meet approved safety, quality and regulatory standards.
- v. Conduct and oversee biorisk assessments for laboratory, research, animal and other activities involving biological, chemical and other hazardous materials, and implement appropriate risk mitigation measures.
- vi. Establish and monitor biosafety and biosecurity systems, including containment, controlled access, safe handling and storage of materials, decontamination, waste management and prevention of unauthorized access or release.
- vii. Coordinate laboratory quality management and operational systems, including SOPs, equipment management, calibration, environmental monitoring, documentation, quality assurance and continuous improvement.

- viii. Oversee the safe management of biological specimens, hazardous substances and laboratory waste, including collection, processing, transportation, storage, inventory, use, decontamination and disposal.
- ix. Develop and coordinate training, competency assessment and awareness programmes in laboratory safety, biosafety, biosecurity, bio-risk management, biobanking, emergency preparedness and responsible laboratory practices.
- x. Coordinate emergency preparedness, incident management and corrective actions for laboratory accidents, exposures, spills, containment breaches, equipment failures and other bio-risk-related incidents, and provide technical guidance on the design, commissioning and upgrading of laboratory facilities.

The Laboratory and Bio-risk Management Services Division is organized into two (3) sections, namely:

- 1) Diagnostics Laboratory and Pathology Section (Diagnostics Laboratory Services Section)
- 2) Laboratory Services Section (Research Laboratory Services Section)
- 3) Bio-risk Management Section (Justify)

1. Diagnostics Laboratory Services Section

The section is established to

- I. Provide laboratory diagnostic services, including haematology, clinical chemistry, microbiology, parasitology and other relevant investigations to support animal health monitoring, clinical management and biomedical research.
- II. Provide technical guidance on the collection, handling, processing, preservation and transportation of biological specimens to ensure sample integrity, biosafety and reliability of diagnostic and research results.
- III. Interpret, document and communicate diagnostic and pathological findings to veterinarians, researchers and other relevant scientific personnel to support clinical decision-making, study design and interpretation of research outcomes.
- IV. Coordinate the collection, preservation, labelling, archiving and retrieval of diagnostic specimens and pathological materials, including tissues, biological samples, histological slides and digital pathology records, in collaboration with the Biobank.
- V. Maintain and develop pathology and diagnostic reference archives and databases, including histological slides, tissue specimens, images and other materials for research, teaching, surveillance and quality assurance.
- VI. Develop, implement and maintain diagnostic SOPs, quality assurance and quality control systems, and ensure compliance with applicable laboratory, biosafety, ethical and regulatory requirements.

- VII. Provide training, mentorship and competency development for pathologists, laboratory scientists, technicians, researchers and other personnel in diagnostic pathology, laboratory techniques, sample management and interpretation of diagnostic findings.
- VIII. xii. Organize and support specialized training programmes, workshops and continuing professional development activities in pathology, laboratory diagnostics and biomedical research.

2. Research Laboratory Services Section

Rationale

The section is responsible for overall coordination of all research laboratories and oversight of biosafety and biosecurity, health and safety, sample management and biobanking to ensure quality of research outputs.

Functions

The section is charged with the following functions:

- I. Develop, implement and periodically review laboratory policies, SOPs, guidelines and quality management systems to ensure standardized, safe and efficient laboratory operations.
- II. Coordinate the management and maintenance of laboratory infrastructure, facilities and equipment, including inventory, calibration, validation, servicing, repair, replacement and performance monitoring.
- III. Manage laboratory supplies, reagents and consumables, including forecasting, procurement, inventory control, appropriate storage, distribution and monitoring of stock levels.
- IV. Coordinate laboratory quality assurance and quality control programmes, including proficiency testing, quality assessments, documentation, corrective actions and continuous improvement of laboratory services.
- V. Coordinate the introduction, validation and implementation of new laboratory technologies, methods, tests, procedures and instrumentation to support biomedical and preclinical research.
- VI. Coordinate laboratory staff development and competency management, including induction, training, mentorship, competency assessment and continuing professional development for laboratory personnel, interns and students.
- VII. Establish and manage institutional biobanking and biological resource repository systems, including sample accessioning, processing, preservation, storage, retrieval, inventory, traceability, security and controlled access.

- VIII. Coordinate the collection, processing and preservation of biological specimens and genetic resources, including blood, tissues, cells, serum, plasma, gametes, embryos and other approved biological materials for research, breeding and conservation purposes.
- IX. Support the preservation of genetic diversity and animal breeding programmes through cryopreservation and management of sperm, ova, embryos and other germplasm from NHPs and other relevant laboratory or conservation species.
- X. Develop and maintain biobank databases, sample tracking and ethical governance systems, ensuring appropriate documentation of sample source, ownership, consent, access, use, transfer, storage and disposal in compliance with applicable ethical, scientific and regulatory requirements.

3. Bio-risk Management Section

Rationale

The Section is established to strengthen institutional and national capacity for the identification, assessment and management of biosafety and biosecurity risks associated with laboratory, animal research and other activities involving biological and hazardous materials.

Specific functions of the Section include:

- i. Develop and implement institutional biosafety, biosecurity and biorisk management policies, guidelines, SOPs and programmes.
- ii. Conduct bio-risk assessments and develop appropriate risk mitigation and control measures for laboratory, animal research and other relevant activities.
- iii. Coordinate and monitor biosafety and biosecurity practices, including containment, controlled access, safe handling, storage, transportation and disposal of biological and hazardous materials.
- iv. Develop and implement programmes for the safe management of biological agents, toxins, specimens, research materials and associated waste.
- v. Conduct regular biorisk inspections, audits and compliance assessments of laboratories, animal facilities and other relevant areas, and coordinate corrective and preventive actions.
- vi. Develop and coordinate biosafety, biosecurity, emergency preparedness and incident response programmes, including management of exposures, spills, accidents and containment breaches.
- vii. Provide training, competency assessment and continuous capacity building for staff, researchers, animal care personnel and other relevant stakeholders in biosafety, biosecurity and biorisk management.
- viii. Coordinate occupational health and safety measures related to biological and laboratory hazards, including exposure prevention, reporting and response.

- ix. Support the safe design, commissioning, upgrading and operation of laboratories, animal facilities and containment infrastructure in accordance with appropriate biorisk management requirements.
- x. Promote a strong institutional culture of biosafety, biosecurity and responsible research through awareness, monitoring, reporting, continuous improvement and compliance with national and international standards.

Staff Establishment

5.6.4 Toxicology Division (Justify) Drawn from Capacity Building Directorate

Rationale

The Toxicology Division is established to provide specialized capacity for evaluating the safety, toxicity and biological effects of drugs, chemicals, environmental contaminants, natural toxins

and other substances, while supporting preclinical research, health-product development, regulatory decision-making and public health protection.

Functions

- i. Conduct toxicological, safety and preclinical studies to evaluate the toxicity, safety, pharmacological effects and biological responses to drugs, chemicals, environmental contaminants, natural toxins and other test substances.
- ii. Undertake mechanistic, translational, environmental and forensic toxicology research to understand toxic effects, exposure pathways, biomarkers and associated health risks.
- iii. Provide diagnostic and analytical toxicology services, including detection, identification and quantification of toxic substances, metabolites and biomarkers in biological and environmental samples.
- iv. Develop, validate and implement toxicological methods, assays and biomarkers for toxicity testing, exposure assessment and safety evaluation.
- v. Develop and maintain appropriate toxicology infrastructure, equipment and facilities to support safe, efficient and high-quality toxicological research and testing.
- vi. Establish and implement quality assurance and quality control systems, including method validation, equipment calibration, proficiency testing, audits and continuous improvement.
- vii. Develop and maintain SOPs, protocols, records and documentation systems to ensure data integrity, sample traceability, study documentation, reporting and secure archiving of toxicology records.
- viii. Ensure compliance with applicable ethical, regulatory, biosafety, animal welfare and international standards governing toxicological research and safety assessment.
- ix. Provide training, mentorship and capacity building in toxicology and safety assessment for researchers, laboratory personnel, veterinarians, students and other relevant stakeholders.
- x. Generate, interpret and provide toxicological evidence for risk assessment and regulatory decision-making, and promote collaboration with government, research institutions, industry and other stakeholders to strengthen national toxicology capacity.

The Toxicology Division is organized into two (2) section, namely:

- 1) Drug Discovery, Development and Delivery Section (previously approved under Capacity Building Directorate)
- 2) Analytical Toxicology Laboratory Section

1. Drug Discovery, Development and Delivery Section

The Drug Discovery, Development and Delivery Section is established to strengthen the institute capacity to support the discovery, development, preclinical evaluation and delivery of

innovative drugs and therapeutic products through integrated biomedical, pharmacological and preclinical research.

Functions

- i. Identify and evaluate potential drug candidates and therapeutic compounds from synthetic, natural and biological sources for priority diseases and health challenges.
- ii. Conduct pharmacological and preclinical studies to assess the efficacy, pharmacokinetics, pharmacodynamics, safety and therapeutic potential of candidate drugs and interventions using appropriate laboratory and animal models.
- iii. Support drug formulation and delivery research, including development and evaluation of appropriate drug delivery systems, routes of administration and strategies for improving therapeutic effectiveness and bioavailability.
- iv. Develop, optimize and validate assays, models and methodologies for drug screening, characterization and evaluation of candidate compounds.
- v. Conduct translational research to advance promising candidates from discovery and proof-of-concept studies towards preclinical development and potential clinical evaluation.
- vi. Collaborate with researchers, universities, pharmaceutical and biotechnology industries, regulatory agencies and other partners to facilitate drug development, technology transfer and commercialization.
- vii. Develop and maintain appropriate infrastructure, equipment, SOPs and quality management systems to support drug discovery, development and delivery activities in compliance with applicable standards.
- viii. Ensure compliance with ethical, regulatory, biosafety, animal welfare and good laboratory practice requirements governing drug research and preclinical evaluation.
- ix. Maintain comprehensive records and documentation of compounds, study protocols, experimental data, formulations, intellectual property, results and other information generated through drug development activities.
- x. Provide training and capacity building in drug discovery, preclinical development and drug delivery, and promote innovation, knowledge translation and development of locally relevant therapeutic products.

2. Analytical Toxicology Laboratory Section

Rationale

The Analytical Toxicology Laboratory Section is established to provide specialized analytical capacity for the detection, identification and quantification of drugs, toxic substances, metabolites, environmental contaminants and other chemical agents in biological and

environmental samples, supporting toxicological research, safety assessment, disease investigations and regulatory decision-making.

Functions

- i. Conduct qualitative and quantitative analysis of drugs, chemicals, toxins, metabolites, contaminants and other substances in biological, environmental and other relevant samples.
- ii. Develop, optimize and validate analytical methods for the detection and quantification of toxic substances and their metabolites using appropriate analytical technologies.
- iii. Support toxicological, pharmacological and preclinical research through analysis of samples generated from animal studies, drug development and safety assessment programmes.
- iv. Conduct therapeutic drug monitoring and exposure assessment, where applicable, to determine drug concentrations, toxic exposures and associated biological responses.
- v. Provide analytical support for environmental and forensic toxicology, including investigation of chemical exposure, poisoning, contamination and suspected toxic substance-related incidents.
- vi. Establish and maintain quality assurance and quality control systems, including method validation, calibration, reference materials, proficiency testing, equipment performance monitoring and corrective actions.
- vii. Manage laboratory equipment, infrastructure, reagents and reference standards, ensuring appropriate maintenance, calibration, inventory, storage and operational readiness.
- viii. Ensure proper sample management and traceability, including sample receipt, identification, processing, storage, chain of custody, data management, documentation and secure archiving.
- ix. Ensure compliance with applicable ethical, regulatory, biosafety, chemical safety and international laboratory standards, including requirements for handling hazardous substances and analytical materials.
- x. Provide training, technical support and capacity building in analytical toxicology, laboratory techniques, data interpretation and quality management, and collaborate with researchers, regulatory agencies, industry and other stakeholders.

Staff Establishment

Table 15: Staff Establishment for the Toxicology Division will be staffed as follows:

Designation	Grade KIP	Approved Establishment	In post	Proposed establishment	Justification
Deputy Director, Toxicology Division	3		0	1	Justify

5.7 Directorate of Capacity Building, Partnership & Grant Management

a) Rationale

The Directorate is established to coordinate capacity building in biomedical and biodiversity conservation research, knowledge transfer and support the research directorates with both grant management systems and incubation of promising products to promote commercialization.

b) Functions

The directorate is charged with the following functions:-

- (i) Assess and offer training to research scientists and healthcare professionals in the biomedical and biodiversity conservation field;
- (ii) Guide on the establishment of an innovation and incubation centre linking research and industry in the health products value chain;
- (iii) Guide on the establishment of an incubation centre linking research and industry in the health products value chain;
- (iv) Provide support and guidance to institute stakeholders on entrepreneurial skills and best practices, including business development, marketing, fundraising, and product development;
- (v) Guide the entry of KIPRE into partnerships and collaborations with other similar institutions or professional organizations locally and internationally;
- (vi) Provide support and guidance to institute stakeholders on funding opportunities and grant applications, including identifying and pursuing grant opportunities, developing grant proposals, and managing grant projects
- (vii) Provide resource and knowledge management services including accessioning of all new books, classification and cataloguing of the same and keeping custody of relevant literature, information, equipment and documentation for the institute.

c) Staff establishment

In order to perform the above functions, the Directorate of Capacity Building, Partnership & Grant Management will be staffed as below.

Table 17: Staff Establishment for the Directorate of Capacity Building, Partnerships & Grant Management

Designation	Grade KIP	Approved Establishment	In post	Proposed Establishment
Director	2	1	0	1
Office Administrator II/I	8/7	1	0	1
Total		2	0	2

The Directorate of Capacity Building, Partnerships & Grant Management is organized into four (4) Divisions namely: -

- (i) Innovation, Incubation and Marketing Division;
- (ii) Training and Capacity Building Division;
- (iii) Partnership & Grant Management Division;
- (iv) Data Science and Knowledge Management Division. (Justify)

5.7.1 Innovation, Incubation and Marketing Division

a) Rationale

The division draws its mandate from the Sections 5 (b) of Legal Notice No. 273 of 2017 (ST&I Act, No. 28 of 2013) which requires the institute to establish an incubation centre linking research and industry in the health products value chain.

b) Functions

The division is responsible for the following functions:

- (i) Establish and maintain an incubation centre linking research and industry.

- (ii) Guide on development of policies, processes and guidelines on innovation and incubation management
- (iii) Provide incubation and acceleration services to institute start-ups and spin-offs, including access to funding, mentorship, networking, and other support services.
- (iv) Participate in research fundraising activities and organize events to identify, expose and reward innovators.
- (v) Develop policies, processes and guidelines for Licensing and Contract management at KIPRE
- (vi) Develop and negotiate licensing agreements for the commercialization of intellectual property assets generated by the institute, including patents, industrial designs, copyrights, trademarks / trade names, trade secrets, and other forms of intellectual property rights.
- (vii) Review and analyze licence agreements to ensure compliance with intellectual property law, institute policies, and other legal and regulatory requirements.
- (viii) Facilitate acquisition of local research permits and develop relevant research agreements such as material transfer agreements (MTAs), Prior informed consent and memorandum of association.
- (ix) Conduct campaign management for marketing initiatives arising from research activities.
- (x) Produce marketing and promotional materials for KIPRE products and services.
- (xi) Create marketing content providing search engine optimization for website.
- (xii) Conduct customer and market research and oversee vendors and agencies.

The Division for Innovation, Incubation and Marketing is organized into three (3) Sections namely: -

- (i) Intellectual property rights Section
- (ii) Industrial liaison Section
- (iii) Sales and Marketing Section

1) *Intellectual Property Rights Section*

The section is responsible for the following functions;

- (i) Develop and implement strategies to identify, evaluate, and protect institute's intellectual property, including patents, trademarks, copyrights, and trade secrets.
- (ii) Develop and implement strategies for commercializing institute research and innovation, including identifying and pursuing licensing and spin-off opportunities.

- (iii) Develop and implement strategies for incubating and accelerating start-ups and spin-offs formed from institute research and innovation, including providing access to funding, mentorship, networking, and other support services.
- (iv) Facilitate acquisition of local and international research permits and develop relevant research agreements such as material transfer agreements, Prior informed consent and memorandum of association.
- (v) Coordinate reporting requirements Provide support and guidance to institute stakeholders on regulatory compliance issues related to entrepreneurship and commercialization activities, including export controls, intellectual property rights, and data management.
- (vi) Provide support and guidance to institute stakeholders on entrepreneurial skills and best practices, including business development, marketing, fundraising, and product development.
- (vii) Collaborate with industry partners to identify and pursue joint research and development opportunities, ventures, strategic partnerships, and research consortia.
- (viii) Develop and implement strategies for promoting the visibility and impact of institute research and innovation through public engagement and outreach activities, including media relations, public speaking, and social media.
- (ix) Provide support and guidance to institute stakeholders on project management and collaboration tools and technologies, including data management, collaborative software, and project tracking tools.
- (x) Develop and implement policies and procedures for managing institute intellectual property, including invention disclosures, patent filings, licensing agreements, and technology transfer.
- (xi) Develop and implement strategies for accessing venture capital, angel investors, and other sources of funding for institute start-ups and spin-offs.
- (xii) Develop and implement strategies for promoting the commercialization of institute research and innovation through licensing and other partnership arrangements.
- (xiii) Collaborate with other departments and stakeholders within the institute to promote interdisciplinary collaboration and knowledge transfer, including developing cross-disciplinary research projects and programs.
- (xiv) Develop and implement policies and procedures for managing institute start-ups and spin-offs, including equity agreements, board governance, and shareholder relations.
- (xv) Develop and implement strategies for promoting diversity, equity, and inclusion in institute entrepreneurship and commercialization activities, including developing policies and practices that promote inclusion and equity in incubation and acceleration programs.

- (xvi) Provide mentorship and training to institute researchers and students on entrepreneurship and commercialization skills, including business plan development, marketing strategy, and fundraising.
- (xvii) Collaborating with industry partners to develop research and development projects that leverage institute expertise and capabilities, and identifying opportunities for collaborative funding.
- (xviii) Coordinate reporting requirements and other obligations to research sponsors regarding innovation developed under a research contract or grant including but not limited to obligations to the Kenya government.
- (xix) Prepare for approvals, reports listing the titles and brief descriptions of all innovations or invention disclosures received.
- (xx) Drafting contracts related to intellectual property and technology transfer, such as licence agreements, confidentiality agreements, material transfer agreements, and research collaboration agreements.

2) *Industry Liaison Section*

The section is responsible for the following functions;

- (i) Securing funding for research and start-ups from industry partners.
- (ii) Develop invention handling procedures and participate in licensing negotiations in conjunction with industry partners
- (iii) Monitor industry trends and developments to identify potential opportunities and threats to the organisation.
- (iv) Maintain a database of contacts of industry-related actors.
- (v) Raise awareness of research activities and offers among industrial actors.
- (vi) Maintain presentation material documenting centre activities targeting industry.
- (vii) Identify opportunities for the institute to support new industry sectors.

3) *Sales and Marketing Section*

The section is responsible for the following functions;

- (i) Develop, review and implement Marketing strategy to support the Institute's objectives;

- (ii) Negotiate the best fit for KIPRE products and services
- (iii) Coordinate Marketing activities;
- (iv) Conduct campaign management for marketing initiatives.
- (v) Produce marketing and promotional materials.
- (vi) Create marketing content providing search engine optimization for website.
- (vii) Conduct customer and market research.
- (viii) Identify KIPRE products and services prime for commercialization
- (ix) Oversee vendors and agencies.

4) Drug Discovery, Development and Delivery Section

The Section is responsible for the following key functions: -

- (i) Undertake research on drug discovery and development
- (ii) Collaborate with pharmaceutical industries for manufacturing and commercialization of the generated drug leads, molecules and nutraceuticals;
- (iii) Develop innovative drug delivery and molecular design strategies for targeting infectious and non-infectious diseases;
- (iv) Support the development of strategies for drug discovery and development, delivery, and toxicology research programs to provide cost-effective alternatives for the treatment and management of diseases through, knowledge generation and capacity building programs;
- (v) Preclinically validate traditional knowledge-based products with claimed healing for efficacy using monkeys as models
- (vi) Conduct capacity building in drug discovery and development, delivery, and toxicology in liaison with other Government agencies & programs;
- (vii) Participate in research fundraising activities; and
- (viii) Disseminate scientific findings through publications, conferences, seminars and workshops.

c) Staffing

The Innovation, Incubation and Marketing Division will be staffed as follows:

Table 18: Staff Establishment for the Innovation, Incubation and Marketing Division

Designation	Grade KIP	Approved Establishment	In post	Proposed Establishment	Justification
Deputy Director,	3	1	0	1	
Chief Research Scientist	2	1	0	1

5.7.2 Training and Capacity Building Division

a) Rationale

The division draws its mandate from the Sections 5 of Legal Notice No. 273 of 2017 (ST&I Act, No. 28 of 2013) which requires the institute to perform research and associated capacity support.

b) Functions

The Section is responsible for the following key functions: -

- (i) Oversee development of short biomedical courses that meet the needs of professionals and students in the biomedical field with relevance to KIPRE mandates.
- (ii) Guide development of educational programs that align with the KIPRE's research objectives
- (iii) Supervise development and management of partnerships with stakeholders including industry, government, non-profit organizations, and other research institutions to advance the institute's research and innovation objectives.
- (iv) Guide and support researchers, staff, and students on partnership development and management, including partnership agreement negotiation, project management, and communication strategies.
- (v) Oversee management of the institution's library.
- (vi) Guide on mechanisms for information, data storage, analysis and knowledge dissemination.

The Division for Training and Capacity Building is organized into three (3) Sections namely: -

- (i) Training and Development
- (ii) Resource and Knowledge Management

1) *Training and Development*

The section is responsible for the following functions

- (i) Develop short biomedical courses that meet the needs of professionals and students in the biomedical field with relevance to KIPRE mandates.
- (ii) Assess the training needs of scientists, researchers and healthcare professionals in the biomedical field so as to develop short courses to meet those needs.

- (iii) Update and improve course materials and content to ensure that they remain current and relevant to the changing needs of the biomedical industry
- (iv) Manage administrative tasks such as registration, and program evaluation to ensure that graduate students are meeting academic standards and making progress toward their degrees.
- (v) Facilitate communication and collaboration between fellowship recipients and their mentors, and promote networking opportunities among graduate students in different fields and programs.
- (vi) Promote research findings by helping disseminate research findings through publications, presentations, and other means, which can contribute to the advancement of knowledge in their respective fields.
- (vii) Participate in the selection of suitable candidates for Research Training programs, based on their academic background, interests, and skill set.
- (viii) Provide supervision and mentorship to interns and attaches, ensuring that they receive adequate guidance and support throughout their placement.
- (ix) Work with researchers to develop educational programs that align with the KIPRE's research objectives and provide value to visitors. These programs could include guided tours of the facility, interactive exhibits, and demonstrations of the research process.

5.7.3 Data science and Knowledge Management Division

I. Rationale

1. Resource and Knowledge Management Section

The section is responsible for the following functions:

- (i) Establishing and managing the institution's library.
- (ii) Provide a mechanism for information, data storage, analysis and dissemination.
- (iii) Maintain a repository of institutional artifacts and achievements.
- (iv) Develop standard operating procedures for library and information services.
- (v) Digitization of reference and other material.
- (vi) Promoting the library resources to users.
- (vii) Provide access to media resources.
- (viii) Maintain registration and access to digital research libraries.

- (ix) Provide media related research support services.
- (x) Conduct information science research.
- (xi) Collaborating and networking with stakeholders in the promotion and marketing of library services.

2. Data Science and Analytics Section

a) Rationale

The section is established to provide a wide range of advanced data science and analytics expertise, guidance, and support to researchers, research teams, and managers engaged in research studies within the institute.

b) Functions

The section is charged with the following functions:

- (i) Collect, analyze and interpret biological and health science data across multiple research entities in the institute.
- (ii) Take part in the design, development, and reporting of research studies
- (iii) Data safeguarding and management of databases, softwares and workflows
- (iv) Provide monitoring and evaluation services to all research projects undertaken within the institution.
- (v) Collect, analyze and interpret biological and health science data across multiple research entities in the institute.
- (vi) Respond to a broad range of complex statistical issues arising in a variety of research projects
- (vii) Establish the ecology and natural history of a disease.
- (viii) Designing, monitoring and assessment of disease control programmes.
- (ix) Evaluating the effects of a disease, and analysis of the costs and economic benefits of alternative control programmes.
- (x) Identify valuable data sources and automate collection processes.
- (xi) Perform research and analysis on all algorithms and coordinate with various teams and provide support to various research programs
- (xii) Assist scientists by providing effective analysis and feedback on all bioinformatics
- (xiii) Provide training to community and analyze various genome sequencing projects for various research projects

- (xiv) Manage all genomic and proteomic data and maintain knowledge on all scientific literature and prepare appropriate reports
- (xv) Design various new computational tools for bioinformatics and assemble and prepare data structures and determine an effective data analysis framework.
- (xvi) Build predictive models and machine-learning algorithms.
- (xvii) Combine models through ensemble modeling.
- (xviii) Analyze large amounts of information to discover disease trends and patterns
- (xix) Conduct capacity building and mentorships in biostatistics and modelling.
- (xx) Disseminate scientific findings through publications, conferences, seminars and workshops

c) Staffing

In order to perform the above functions, the Data Science and Analytics Section will be staffed as shown in Tables below.

Table 19: Staff Establishment - Data Science and Knowledge Management Division

Designation	Grade KIP	Approved Establishment	In post	Proposed Establishment	Justification
Deputy Director, Data Science & Knowledge Management Division	3		0	1	JUSTIFY
Chief Research Scientist	2		0	1	JUSTIFY
Senior Principal Research Scientist I	3		0	1	JUSTIFY
Sub-total			0	3	JUSTIFY

Sub Total		7	4	7	
Total		12	6	15	

5.7.3 Partnerships and Grants Management Section

The section is responsible for the following functions

- (i) Develop and manage partnerships with stakeholders including industry, government, non-profit organizations, and other research institutions to advance the institute's research and innovation objectives.
- (ii) Provide guidance and support to researchers, staff, and students on partnership development and management, including partnership agreement negotiation, project management, and communication strategies.
- (iii) Preparation of contractual and non-disclosure agreements between collaborating partners
- (iv) Establish collaborations that will influence policy changes
- (v) Develop policies, processes and guidelines on partnership management at KIPRE
- (vi) Develop and implement policies and procedures for managing partnerships, including risk assessment, contract negotiation, and project evaluation.
- (vii) Develop and implement policies and procedures for managing conflicts of interest and ensuring ethical conduct in partnership activities, including disclosure requirements and conflict resolution mechanisms.
- (viii) Develop and implement strategies for maximizing the impact and value of partnerships, including assessing collaboration potential, negotiating favourable terms, and managing risk.
- (ix) Identify relevant funding opportunities for researchers and provides information on funding sources, application requirements, and deadlines.
- (x) Support staff in developing grant proposals, including providing guidance on proposal structure, content, and budget development.
- (xi) Review grant proposals to ensure they meet the funding agency's requirements and are well-written and persuasive.
- (xii) Coordinating development and submission of core institutional grant calls
- (xiii) Maintain records of grant submissions, awards, and progress reports to ensure compliance with funding agency requirements
- (xiv) Collaborate with internal and external stakeholders to develop interdisciplinary research projects that can be funded through grants.
- (xv) Develop and implement policies and procedures for managing grants, including tracking and reporting grant expenditures, managing subcontractors and collaborators, and ensuring compliance with funding agency requirements.

- (xvi) Monitor changes in funding agency policies and regulations and provide guidance to institute researchers on how to comply with these changes.
- (xvii) Manage sub-awards and subcontractors, including ensuring compliance with funding agency requirements and managing payment schedules.

c) Staffing

The Training and Capacity Building Division will be staffed as follows:

Table 19: Staff Establishment for the Training and Capacity Building Division

Designation	Grade KIP	Approved Establishment	In post	Proposed Establishment	Justification
Deputy Director, Training and Capacity Building Division	3	1	0	1	
Chief Research Scientist	2	1	0	1	Provide technical expertise in support of sections in the division

5.8 Institutional Scientific & Ethical Review Committee (ISERC)

a) Rationale

ISERC is registered with the National Commission for Science and Technology and Innovation and submits annual reports of all activities, upon which it receives renewal to carry on activities.

b) Functions

The Committee is responsible for the following functions:

- (i) Ensure adherence to standards for scientific conduct and research ethics best practices among scientists with ISERC-approved.
- (ii) Review and approve new research protocols.
- (iii) Monitor ISERC-approved ongoing research protocols to ensure that sound scientific and ethical principles are adhered to in the conduct of research.

- (iv) Provide and facilitate training in research methodology and ethics towards building capacity for researchers and committee members.
- (v) Support the improvement of health by promoting best practices in research conduct and ethics.
- (vi) Initiate and support research in bio-medical ethics.
- (vii) Serves as a resource centre for researchers and committee members on matters concerning research ethics.
- (viii) Review, at least semi-annually, the institution's program for the humane care and use of animals and inspect at least semi-annually, the institution's animal facilities (including satellite facilities).
- (ix) Prepare reports to the Institutional Official (IO) of the IACUC evaluations.
- (x) Review animal welfare concerns.
- (xi) Make recommendations to the IO on any aspect of the animal program, facilities, or personnel training.
- (xii) Review and approve, those components of PHS conducted or supported activities related to the care and use of animals.
- (xiii) Review and approve, proposed significant changes to the use of animals in ongoing activities; and be authorized to suspend an activity involving animals.
- (xiv) Provide oversight on review and approval of proposed animal use (protocol review) and of proposed significant changes to animal use;
- (xv) Regular inspection of facilities and animal use areas; regular review of the Program; ongoing assessment of animal care and use; and establishment of a mechanism for receipt and review of concerns involving the care and use of animals at the institution.
- (xvi) The committee must meet as often as necessary to fulfil its responsibilities, and records of committee meetings and results of deliberations should be maintained;
- (xvii) Program review and facilities inspections.

c) Staff Establishment

In order to execute the above functions, the ISERC Secretariat will be staffed as follows:

Table 20: Staff Establishment for ISERC Secretariat

Designation	KIP Grade	In Post	Proposed Establishment	Justification
Research Scientist II, Ethics regulation.	8	0	2	
Office Administrative Assistant Supervisor	9	0	1	
Office Administrative Assistant I / Senior	11/10	0		
Senior Laboratory Technologist	6	0	2	Medical & Animal specialist
Laboratory Technologist I	7	0		
Laboratory Technologist II/I	9/8	0		
Total		0	5	5

5.9 **CORPORATE SERVICES DIRECTORATE (Justisfy Directorate)**

a) Rationale

The Directorate is established pursuant to Clause 5(m) of Legal Notice No 273 of 2017 to provide leadership and coordination of Human Resource Management & Development, Administration, Corporate Communication and Information Communications Technology.

b) Functions

The functions of the Directorate are to: -

a) Rationale

- i. Coordinate the formulation, implementation and review of policies, strategies, plans, procedures and manuals for Information Communication Technology, Human Resource & Administration and Corporate Communications;
- ii. Coordinate human resource training and development programmes;
- iii. Oversee development and implementation of performance management system;
- iv. Ensure compliance with Human Resource and Administration statutory and regulatory requirements;
- v. Coordinate and oversee the implementation of the recommendation of work environment surveys;
- vi. Provide systems and operational procedures including Financial management information, internal controls and accounting;

- vii. Manage and control the Institute's finances; and advice Chief Executive Officer appropriately;
- viii. Participate in development and implementation of the Institute's short- and long-term operation plans;
- ix. Ensure compliance with internal and external reporting requirements including accurate production of financial and non-financial data;
- x. Plan and ensure efficient and effective use of the Institute's finances;
- xi. Oversee development and implementation of finance and accounts policies, strategies, standards and procedures;
- xii. Formulate the financial policy of the Institute to ensure optimal utilization of funds, and rational potential uses of those funds against the cost of alternative potential sources;
- xiii. Maintain and constantly review the Institute's revenue and expenditure streams;
- xiv. Prepare timely and accurate financial reports in compliance with the law and statutory and regulatory requirements;
- xv. Monitor creditors and ensure that payments are processed in good time;
- xvi. Ensure financial records are kept according to laid down financial policies and standards;
- xvii. Ensure timely submission of statutory reports to the relevant authorities;
- xviii. Oversee management of outsourced administrative services;
- xix. Coordinate provision of ICT services;
- xx. Coordinate Corporate Communication services and Customer Care;
- xxi. Ensure effective branding and visibility of the Institute;
- xxii. Coordinate the Institutes Social Responsibilities (CSR) of the Institute;
- xxiii. Oversee library services;
- xxiv. Oversee the records management;
- xxv. Implement the Board's strategic objectives on Human Resource Management and Administration;
- xxvi. Develop and manage staff welfare schemes;
- xxvii. Establish and maintain a catalogue of all KIPRE assets and properties;

xxviii. Advise the Institute on all Information Communication Technology matters; Formulate, implement and maintain information technology policies, procedures and systems;
Provide strategic leadership, advice and direction in the areas of Corporate Communication, Customer Care, Media Relations and Management, Crisis Communication, Customer Service and Experience, Service delivery, CSR among others; and
Provide advisory and support to other Directorate/Divisions/Sections on development and implementation of communication

c) Staff Establishment

In order to execute the above functions, the Office of the director will be staffed as follows:

Table 23: Establishment for Office of the Director, Corporate Services Directorate

S/N	Designation	Grade KIP	Approved	Inpost	Proposed Establishment	Remarks
1.	Director, Corporate Services	2	1	0	1	
2.	Assistant Office Administrator/ Senior	9/8	1	1	1	
Total			2	1	2	

The Directorate will be organized into four (4) Divisions

- i (i) Human Resource and Administration Division;
- ii (ii) Finance and Accounts Division;
- iii (iii) Corporate Communication Division; and
- iv (iv) Information Communication Technology Division.

3.8.1 Human Resource and Administration Division

The division is established to manage Human Resource and administration functions under the Human Resource management professionals Act No.52 of 2012, Employment Act Cap 226 and the Kenya Gazette Supplement No.169.

b) Functions

The functions of the division are as follows: -

- (i) Guiding the development, interpretation, implementation and review of human resource management and administration policies, standards and guidelines;
- (ii) Interpreting and advising on human resource management and administration policies and regulations;
- (iii) Developing human resource management and administration plans to ensure effective succession management;
- (iv) Ensuring institutionalization of performance management including performance appraisal system;
- (v) Facilitating human resource planning, communication, discipline, employee relations, remuneration and staff welfare;
- (vi) Overseeing the development and maintenance of an up-to-date human resource management and administration database;
- (vii) Maintaining complement control;
- (viii) Facilitating establishment and maintenance of catalogue of all Institute's Assets and Properties;
- (ix) Overseeing the preparation and implementation of a maintenance schedule of all Assets in the Institute;
- (x) Coordinating and overseeing the implementation of the recommendation of work environment surveys to improve the work conditions of the Institute;
- (xi) Coordinating fleet management;
- (xii) Coordinating preparation of masterplan for land use to facilitate the use of Institute property in a sustainable way; and
- (xiii) Ensuring compliance with statutory and regulatory requirements regarding building and construction.

The Division has been divided into two sections namely;

- (i) Human Resource Management; and
- (ii) Administration.

1) Human Resource Management Section

The division is responsible for ensuring that the Institute has adequate supply of qualified human resource and their continued performance management, development and motivation to support the delivery of KIPRE mandate.

The functions of the section are as follows: -

- (i) Human Resource planning.
- (ii) Provide technical advisory on Human Resource matters in the Institute.
- (iii) Plan and conduct effective new employee orientation within the Institute to foster positive attitude toward organizational objectives.
- (iv) Ensure Human Resource strategies, policies, procedures and initiatives are aligned with the overall business strategy to help align the workforce with the strategic goals of the Institute.
- (v) Manage the recruitment and selection process of staff.
- (vi) Develop compensation plans to align performance management systems;
- (vii) Manage employee's relations, benefits and exits.
- (viii) Execution and management of a performance appraisal system.
- (ix) Support the development of an organizational culture that reflects the Institute's values, promotes accountability and high performance.
- (x) Provide secretariat services to the Human Resource Management Committees;
- (xi) Serve as a link between management and employees by handling grievances, and helping resolve work-related problems within the institute.
- (xii) Maintain records and compile statistical reports concerning personnel-related data.
- (xiii) Ensure compliance to policies, legislation and statutes related to Human Resource.
- (xiv) Coordinate staff recruitment, deployment, promotion and discipline.

2) Administration Section

The section is responsible for the efficient management of Office functions in the Institute. The functions of the section are as follows

- (i) Interpret and implement Office Administrative policies and procedures in consultation with the administration head;
- (ii) Train and capacity build Office Administrative Services personnel;

- (iii) Take oral dictation;
- (iv) Manage and organize office records and documents;
- (v) Process data;
- (vi) Operate office equipment;
- (vii) Attend to visitors/clients;
- (viii) Handle telephone calls and appointments;
- (ix) Maintain office diary and travel itineraries
- (x) Ensure security of office records, equipment and documents including classified materials;
- (xi) Prepare responses to simple routine correspondence;
- (xii) Establish and monitor procedures for record keeping of correspondence and file movements;
- (xiii) Ensure security, integrity and confidentiality of data; and
- (xiv) Manage office protocol and etiquette.

c) Staff Establishment

The Human Resource and Administration Division will be staffed as follows:

Table 21: Establishment for the Human Resource and Administration Division

Designation	Grade KIP	Approved	In post	Proposed Establishment	Justification
Deputy Director <i>Human Resource and Administration Division</i>	3	1	0	1

5.10 Finance and Accounts Division

a) Rationale

This division is responsible for development and implementation of accounting and financial management systems that ensure adherence to planned and approved budgets and keeping books of accounts relating to the income and expenditure as well as assets and liabilities of the Institute.

b) Functions:

The functions of Division are as follows: -

- (i) Implement financial regulations, policies, strategies and plans;
- (ii) Ensure effective and efficient use of financial resources;
- (iii) Coordinate preparation of budget proposals and cash flow projections;
- (iv) Implement Budgetary and cost control;
- (v) Revenue and Treasury Management and reporting;
- (vi) Maintain books of accounts and other financial records;
- (vii) Implement, monitor and review Budget;
- (viii) Develop and implement internal financial controls;
- (ix) Prepare financial reports and statements and submit to relevant institutions;

- (x) Maintain accurate and complete financial record of the Institute and regularly review the financial system;
- (xi) Ensure compliance with applicable financial statutory obligation and circulars; and
- (xii) Provide secretariat services to the Committee responsible for Finance.

1) Finance Division

The Division exists to provide prudent management of financial resources within the existing legal framework. The Division is responsible for the following functions:

- (i) Coordinate preparation of budget proposal and cash flow projection;
- (ii) Provide technical support to other technical departments in the budget making process;
- (iii) Prepare and submit periodic financial reports;
- (iv) Manage the commitments and Expenditures within available budgetary provisions;
- (v) Monitor expenditure of projects and programmes;
- (vi) Ensure effective and efficient use of financial resources;
- (vii) Develop and implement Internal Financial Controls including cost controls;
- (viii) Maintain accurate and complete financial record of the Institute and regularly review the financial system;
- (ix) Maintain Fixed Assets register;
- (x) Ensure optimal management of Institute debts;
- (xi) Coordinate billing and revenue collection; and
- (xii) Manage Institute investments.

2) Accounts Division

The division exists to provide accounting services to ensure prudent utilization of financial resources in the Institute.

The Division is responsible for the following functions:

- (i) Implement accounting and internal control system for revenue of the Hospital;

- (ii) Review transaction records for revenue and grants;
- (iii) Coordinate invoicing activities for Hospital's revenue in all departments;
- (iv) Analyze, reconcile and maintain the general ledger accounts;
- (v) Carry out monthly expenditure reconciliation and address any discrepancies;
- (vi) Prepare periodic financial statements and reports;
- (vii) Implement recommendations from internal and external audit findings and responding to audit queries;
- (viii) Process payroll;
- (ix) Undertake billing and revenue collection;
- (x) Comply with statutory financial obligation and remittances;
- (xi) Liaise with stakeholders to develop and implement financial information systems and processes; and
- (xii) Undertake monthly bank reconciliations.

c) Staff Establishment

Finance and Accounts Division will be staffed as indicated below:

Table 22: Staff Establishment for the Finance and Accounts Division

Designation	Grade KIP	Approved Establishment	In post	Proposed Establishment	Justification
Deputy Director, Finance and Accounts	3	1	0	1

5.11 Information Communication Technology Division

a) Rationale

The Division is anchored in the national ICT Policy based on the Economic Recovery Strategy for Wealth and Employment Creation (2003-2007) and ensures that the Institute leverages on Information Technology to deliver its mandate.

b) Functions

The Division is responsible for the following functions: -

- (i) Develop ICT policies, standards, guidelines and strategies;
- (ii) Liaise with user divisions to ensure ICT service delivery;
- (iii) Advise on the impact of emerging ICT standards, guidelines, policies, rules and regulations;
- (iv) Develop and manage an Institutional repository for biobank, Animal Health records and Resource & Knowledge management databases;
- (v) Provide ICT guidance for staff and students;
- (vi) Plan, monitor and evaluate ICT projects and systems;
- (vii) Deploy, configure, support and maintain local area networks (LAN) and wide area network (WAN) for the Institute;
- (viii) Develop, deploy and maintain critical business processes applications;
- (ix) Co-ordinate, acquire, develop and maintain ICT infrastructure;
- (x) Ensure optimum utilization and leverage of available ICT resources across the Institute;
- (xi) Oversee prudent management ICT infrastructure, resources and assets;
- (xii) Ensure adherence and compliance to ICT standards and other regulatory requirements;
- (xiii) Prepare ICT technical specifications and user manuals and documentations; and

(xiv) Design, schedule and initiate end user training.

c) Staff Establishment

The Information Communications Technology Division will be staffed as follows:

Table 23: Establishment for the Information Communications Technology Division

Designation	Grade KIP	Approved Establishment	In post	Proposed Establishment
Deputy Director, Information Communications Technology	3	1	0	1
Assistant Director Information Communications Technology	4	1	0	
Principal Information Communications Technology Officer	5		0	1
Senior Information Communications Technology Officer	6	1	0	1
Information Communications Technology Officer II/I	8/7	2	4	4
Principal ICT Assistant	5	1	0	1
Senior ICT Assistant	6		0	
ICT Assistant I	7		0	
ICT Assistant III/II	9/8	1	2	2
Total		7	6	10

5.12 Corporate Communication Division

a) Rationale

The division is responsible for effective and efficient coordination of all Communications related activities including, public relations, digital communications, internal communications, sponsorships, events, brand and reputation management in the Institute. These activities are anchored in the Media Council Act, 2013; The Kenya Information and Communications (Amendment) Act, 2013, National ICT Master plan (2014-2017) and CAP 411A of Kenya Information and Communications ACT (2012).

b) Functions

The division is responsible for the following key functions:

- (i) Develop, review and implement communications strategies and plans to support the Institute's objectives;
- (ii) Advise on appropriate Corporate Communications policies;
- (iii) Manage the corporate image of the Institute;
- (iv) Develop and implement communication and branding strategy;
- (v) Monitor and manage internal and external media communication functions;
- (vi) Coordinate the Institute's corporate events;
- (vii) Manage protocol;
- (viii) Develop Information, Education and Communication (IEC) materials;
- (ix) Coordinate preparation of newsletters, speeches, publications and other materials;
- (x) Develop, implement and review of the Corporation's customer service strategy and charter;
- (xi) Initiate and oversee the Institute's Corporate Social Responsibility (CSR) initiatives and provide reports on their implementation;
- (xii) Provide communication linkage between KIPRE and stakeholders.

c) Staff Establishment

The Corporate Communication Division will be staffed as follows:

Table 24: Staff Establishment for the Corporate Communication Division

Designation	Grade KIP	Approved Establishment	In post	Proposed Establishment	Justification
Deputy Director, Corporate Communication	3	1	0	1	
Assistant Director, Corporate Communication	4		1	1	Justify

5.13 Planning and Strategy Division

a) Rationale

The division is responsible for spearheading KIPRE policy and strategy formulation and execution, planning and performance management, monitoring and evaluation, risk management and quality management systems, projects management, and budget forecasting for realization of Institute vision.

b) Functions

The Division is responsible for the following key functions:

- (i) Formulate, implement and review planning & strategy policies, strategies and programs;
- (ii) Provide advice on the capital projects to ensure alignment with the strategic business goals of the Institute;
- (iii) Centralize appraisal and cost benefit analysis for all projects;

- (iv) Support divisions to develop and review Key Performance Indicator's (KPI's);
- (v) Measure the performance of the key projects through the selected KPI's;
- (vi) Coordinate the development, evaluation and reviewing of the Institute Strategic Plan;
- (vii) Coordinate the development, implementation and evaluation of the Institute Performance contract;
- (viii) Compile and disseminate periodic performance reports;
- (ix) Coordinate development of standard operating procedures and control documents across all functions in the Institute;
- (x) Coordinate quality management in line with established systems and procedures including Quality Management Systems and ISO requirements to achieve goals, objectives and work standards of the Institute;
- (xi) Facilitate Risk Management in the Institute through overseeing development and implementation of an Enterprise Risk Management Framework;
- (xii) Coordinate preparation, formulation and implementation of the Institute quality management through quality Assurance Programme and standard operating procedures
- (xiii) Provide standardized project planning guidelines, methods, systems, tools and metrics for consistent value outcome;
- (xiv) Monitor and evaluate progress of all key Institute projects and programmes;
- (xv) Develop and maintain a database of all approved Projects;
- (xvi) Design Monitoring & Evaluation tools;
- (xvii) Compile and disseminate Monitoring & Evaluation reports; and
- (xviii) Coordinate monitoring, evaluation, review and implementation of SWOT and PESTEL concerns.

c) **Staff Establishment**

The Planning and Strategy Division will be staffed as indicated below

Table 25: Establishment for the Planning and Strategy Division

5.14 Supply Chain Management Division

a) Rationale

The division facilitates the procurement of goods, works and services, inventory management and disposal in accordance with the Public Procurement Asset Disposal Act (PPADA), 2015, Public Procurement Regulations Disposal Act of 2020 (PPRDA).

b) Functions

The division will be responsible for the following functions: -

- (i) Offer professional advice on procurement matters;
- (ii) Develop and implement procurement procedure manual;
- (iii) Prepare and implement the consolidated disposal and procurement plans;
- (iv) Facilitate procurement of goods, works and services in line with the requirements of the PPADA and PPRDA;

- (v) Coordinate disposal of obsolete assets in line with PPADA and PPRDA requirements;
- (vi) Prepare and publish tender awards in Public Procurement Information Portal (PPIP) and the Institute website;
- (vii) Prepare procurement contract documents in line with the award decision and maintain records;
- (viii) Conduct market survey and research;
- (ix) Maintain and archive the procurement and asset disposal documents and records for the prescribed period;
- (x) Ensure smooth distribution of inventory;
- (xi) Provide information, as required, for any petition or investigation to debar a tenderer or contractor or any investigation under review procedures;
- (xii) Provide secretariat services to the tender and disposal committee;
- (xiii) Prepare statutory and management reports;
- (xiv) Conduct and monitor periodic stock and initiate procurement process; and
- (xv) Certify the invoices and vouchers.

c) **Staff Establishment**

The Supply Chain Management Division will be staffed as follows:-

Table 26: Establishment for the Supply Chain Management Division

Designation	Grade KIP	Approved Establishment	In post	Proposed Establishment	Justification
Deputy Director, Supply Chain Management	3	1	0	1	
Assistant Director, Supply Chain Management	4	1	0	1	
Principal Supply Chain Management Officer	5	2	0	4	
Senior Supply Chain Management Officer	6		0		Justify
Supply Chain Management Officer II/I	8/7		4		
Principal Supply Chain Management Assistant	5	1		1	
Senior Supply Chain Management Assistant	6				
Supply Chain Management Assistant I	7		1		

Supply Chain Management Assistant III/II	9/8	2	3	3	Justify
Total		7	8	10	

5.15 Board Management and Legal Services Division

a) Rationale

The Division is also responsible for advising the Board and Management on legal matters, overseeing legal matters as well as implementing good corporate governance to enhance organizational credibility as provided under the KIPRE ACT OF 2017 of the Laws of Kenya and other relevant legislations.

b) Functions

The Division will be responsible for the following functions: -

1. Board Management Services

- i) Provide guidance to the board on their duties and responsibilities and other matters governance
- ii) Assist the Board in carrying out the following
 1. Board Induction and Training
 2. Updating the Board and Committee Charters
 3. Preparation of Board Work Plan
 4. Board Evaluation
 5. Governance Audit
 6. Implementation of the code of conduct and ethics
- iii) Ensure the timely preparation and circulation of Board and Committee Papers
- iv) Ensure timely circulation of board and committee minutes
- v) Be the custodian of the seal of the organization and account to the board for its use
- vi) Maintain update the register of conflicts of interests
- vii) Ensure that the Board members are aware of all the relevant laws affecting the organization
- ix) Facilitate effective communication between the organization and the stakeholders

- x) Ensure annual returns are promptly filed with relevant authorities
- xi) Except in exceptional circumstances, ensure that the Board and Committee papers are circulated in advance of the meeting

Legal Services

- (i) Safeguard KIPRE by ensuring it is adequately defended before the Courts of law, and Tribunals.
- (ii) Provide legal support to the Technical Directorates and divisions in the development and review of regulations, guidelines and procedures.
- (iii) Provide guidance in the scope of public communication.
- (iv) Draft, review and amend where necessary contractual instruments entered into between KIPRE and third parties.
- (v) Review contracts or other documentation where KIPRE has committed itself and assess legal implications necessary for the attention of Management.
- (vi) Provide legal advice and interpretation of statutes, subsidiary rules, and regulations.
- (vii) Manage, review, and monitor progress and status of outstanding litigation.
- (viii) Issue instructions, liaising with the Institute's external advocates with a view to ensuring they act in KIPRE's interest while handling cases on its behalf.
- (ix) Initiate, review, draft necessary instruments for business transactions and prepare and an advisory checklist to be adopted for purposes of ensuring the information necessary for the preparation of the instrument is submitted on time.
- (x) Ensure the Institute complies with constitutional, regulatory and relevant laws in force through the provision of legal advisory services.
- (xi) Ensure risks arising from contractual engagements are effectively and efficiently managed.
- (xii) Provide advice to management on all legal, regulatory and contractual matters.
- (xiii) Represent KIPRE in court.
- (xiv) Provide legal guidance on contractual and statutory obligations binding upon the Institution.

c) Staff Establishment

The Board Management and Legal Services Division will be staffed as follows

Table 27: Staff Establishment for Board Management and Legal Services Division

Designation	Grade KIP	Approved Establishment	In post	Proposed Establishment	Justification
Deputy Director Board Management and Legal Services	3	1	0	1	
Assistant Director Board Management / Legal Services	4	1	0	1	
Principal Legal Officer	5		0		
Senior Legal Officer	6		0		
Legal Officer II/I	8/7	1		1	
Legal Assistant III/II	9/8	1	0	1	
Total		4	0	4	

5.16 Internal Audit Division

a) Rationale

The division is responsible for providing independent assurance on governance, risk management and internal controls to ensure KIPRE complies with statutory regulations and internal policies and procedures.

b) Functions

The Division will be responsible for the following functions: -

- (i) Implement internal audit policies, strategies and plans;
- (ii) Conduct regular and special audits and investigations;
- (iii) Monitor and report on the Institute overall risk profile;
- (iv) Provide secretariat services to the Audit committee;
- (v) Review accounting reports for correctness and accuracy;

- (vi) Provide independent assurance on risk management process on both design and operation;
- (vii) Provide assurance on risk control effectiveness, efficiency and adequacy on risk management processes;
- (viii) Review the governance mechanisms of the Board to ensure transparency and accountability with regard to management and safeguard of assets;
- (ix) Review and provide assurance on the Risk Management framework;
- (x) Conduct investigations with view of preventing or averting issues of fraud and financial abuse within the Institute; and
- (xi) Prepare and submit periodic reports to Management and the Board Audit Committee.

c) Staff Establishment

The Internal Audit Division will be staffed as indicated in the table below

Table 28: Staff Establishment for the Internal Audit Division

Designation	Grade KIP	Approved Establishment	In post	Proposed Establishment	Justification
Deputy Director, Internal Audit Division	3	1	0	1	Head the Internal Audit Division
Sub-Total		1	0	1	

Table 28.1: Staff Establishment for the Internal Audit Section

Designation	Grade KIP	Approved Establishment	In post	Proposed Establishment	Justification
Assistant Director, Internal Audit	4	1	0	1	Head the Internal Audit Section
Principal Auditor	5		0	1	
Senior Internal Auditor	6		0		
Internal Auditor II / I	8/7/	1	1	2	Ease workload on the in-post

					internal auditor
Sub-Total		2	1	4	

Table 28.2: Staff Establishment for the Risk Management & Assurance Section

Designation	Grade KIP		In post	Proposed Establishment	Justification
Assistant Director, Risk Management & assurance	4		0	1	To head the risk Management & assurance Section
Principal Risk Management & Assurance Officer	5		0	0	
Senior Risk Assurance Officer	6		0	0	
Risk Management officer II/I	8/7/		0	1	To work on compiling the risk register for the institution
Assistant Office Administrator III / II	9/8/		0	1	Assist in compiling the risk register for the institution
Sub-total			0	3	
Grand Total			1	8	

INTERNATIONAL ADVISORY BOARD

a) Rationale

The International Advisory Board (IAB) comprises of prominent local and international scientists with distinguished careers in basic and preclinical biomedical sciences. KIPRE seeks to benefit from this expertise in grant making, international accreditations and in global trends in research. This board is purely advisory with no enumeration, and has no legal mandate.

b) Achievements

The IAB has existed since 2010 and has helped the institution achieve the following:

- (i) Assisted in guiding designs for the animal facility and the entire program for animal care and use, that resulted in the accreditation of KIPRE by Association for Assessment and Accreditation of Laboratory Animal Care (AAALAC)
- (ii) Enabled KIPRE to be the **FIRST** African institution to achieve good financial grant practices compliance, achieving silver status
- (iii) Assisted KIPRE to achieve, maintain and enhance its status as an African centre of excellence in R&D including status as an African Network for Drug and Innovation (ANDi) centre of excellence in drug development and innovation, and also KIPRE as a WHO collaborating centre
- (iv) Establish new partnerships which have resulted in diverse research programs
- (v) Supported development of new research programs to deal with emerging diseases
- (vi) Facilitated training and exchange programs for staff, interns and students leading to technology transfer
- (vii) Supported grant application between local and international collaborators
- (viii) Strengthened benchmarking of KIPRE with local and international organizations
- (ix) Supported scientific conferences at KIPRE giving them international recognition.

APPENDIX A:. STAFF ESTABLISHMENT

Designation	Grade KIP	In post	Proposed
Office of Director General / CEO			
Director General / CEO	1	0	1
Principal Office Administrator	5	0	1
Senior Office Administrator	6	0	
Office Assistant Supervisor	9	0	1
Senior Office Assistant	10	0	
Principal Driver	8	0	1
Senior	9		
Total		0	4
RESEARCH AND PRODUCT DEVELOPMENT DIRECTORATE			
Director	2	0	1
Office Administrator II/I	8/7	0	1
Office Assistant III / II	13/12	0	1
Driver II / I	11/10	0	1
Total		0	4
Infectious Diseases Division			
Deputy Director, Infectious Diseases	3	0	1
Chief Clinical / Research Scientist	2	1	2
Senior Principal Clinical / Research Scientist I	3	0	
Assistant Office Administrator III/II	9/8	0	1
Sub Total		1	3
Virology Section			
Assistant Director, Research	4	0	1
Senior Principal Research Scientist II	4	0	1

Designation	Grade KIP	In post	Proposed
Principal Research Scientist	5	1	2
Senior Research Scientist	6	0	
Research Scientist II/I	8/7	1	4
Laboratory Technologist II	8	0	2
Laboratory Technologist III	9	0	
Total		4	10
Microbiology, Parasitology and Vector Biology Section			
Assistant Director, Research	4	0	1
Senior Principal Research Scientist II	4	0	2
Principal Research Scientist	5	1	
Senior Research Scientist	6	0	
Research Scientist II/ I	8/7	1	3
Laboratory Technologist I	7	1	1
Laboratory Technologist III/II	9/8	0	1
Total		3	8
Immunology and Vaccine Development Section			
Assistant Director, Research	4	0	1
Senior Principal Research Scientist II	4	0	3
Principal Research Scientist	5	1	
Senior Research Scientist	6	0	
Research Scientist II/I	8	1	3
Senior Laboratory Technologist	6	0	1
Laboratory Technologist I	7	1	
Laboratory Technologist III/II	9/8	0	2
Total		3	10
Zoonotic Surveillance & Disease Ecology Section			
Assistant Director, Research	4	0	1
Senior Principal Clinical Research Scientist II	4	1	2
Principal Clinical Research Scientist	5	1	
Senior Clinical Research Scientist	6	0	2
Clinical Research Scientist II/I	8	1	4
Senior Laboratory Technologist	6	1	1
Laboratory Technologist I	7	0	
Laboratory Technologist III/II	9/8	0	2
Total		4	12

Designation	Grade KIP	In post	Proposed
Climate & Health Section			
Assistant Director, Research	4	0	1
Senior Principal Clinical Research Scientist II	4	1	3
Principal Clinical Research Scientist	5	1	
Senior Clinical Research Scientist	6	0	
Clinical Research Scientist II/I	8	2	2
Senior Laboratory Technologist	6	1	2
Laboratory Technologist I	7	0	
Laboratory Technologist III/II	9/8	0	
Total		6	8
Total		21	52
Reproductive Health & Biology Division			
Deputy Director, Research	3	0	1
Chief Research Scientist	2	1	2
Senior Principal Research Scientist I	3	1	
Assistant Office Administrator III/II	9/8	0	1
