

Planning in the Health Sector

Terry Watiri

Definition of Planning

- **A plan** is defined as a “set of **desirable targets** to be reached in a **given period of time**, and **defined means** or ways by which the **targets will be achieved.**”
- **Planning** is a process of determining **what and when will** it be done and using **what resources.**
- **Planning** helps to define a “journey” of where one wants to go and the road map and timeline for getting to the desired destination.

Planning

- Planning in the Government of Kenya - structured process aimed at guiding the country's development and achieving its long-term goals.
- This process is primarily anchored on the Kenya Vision 2030, a national development blueprint that aims to transform Kenya into a newly industrialized, middle-income country by the year 2030.
- The Vision 2030 is implemented through a series of five-year Medium-Term Plans (MTPs). Each MTP outlines the main policies, reforms, programs, and projects that the (BETA)
- The State Department for Economic Planning, under the National Treasury & Planning, plays a crucial role in this process.

Types of Plans

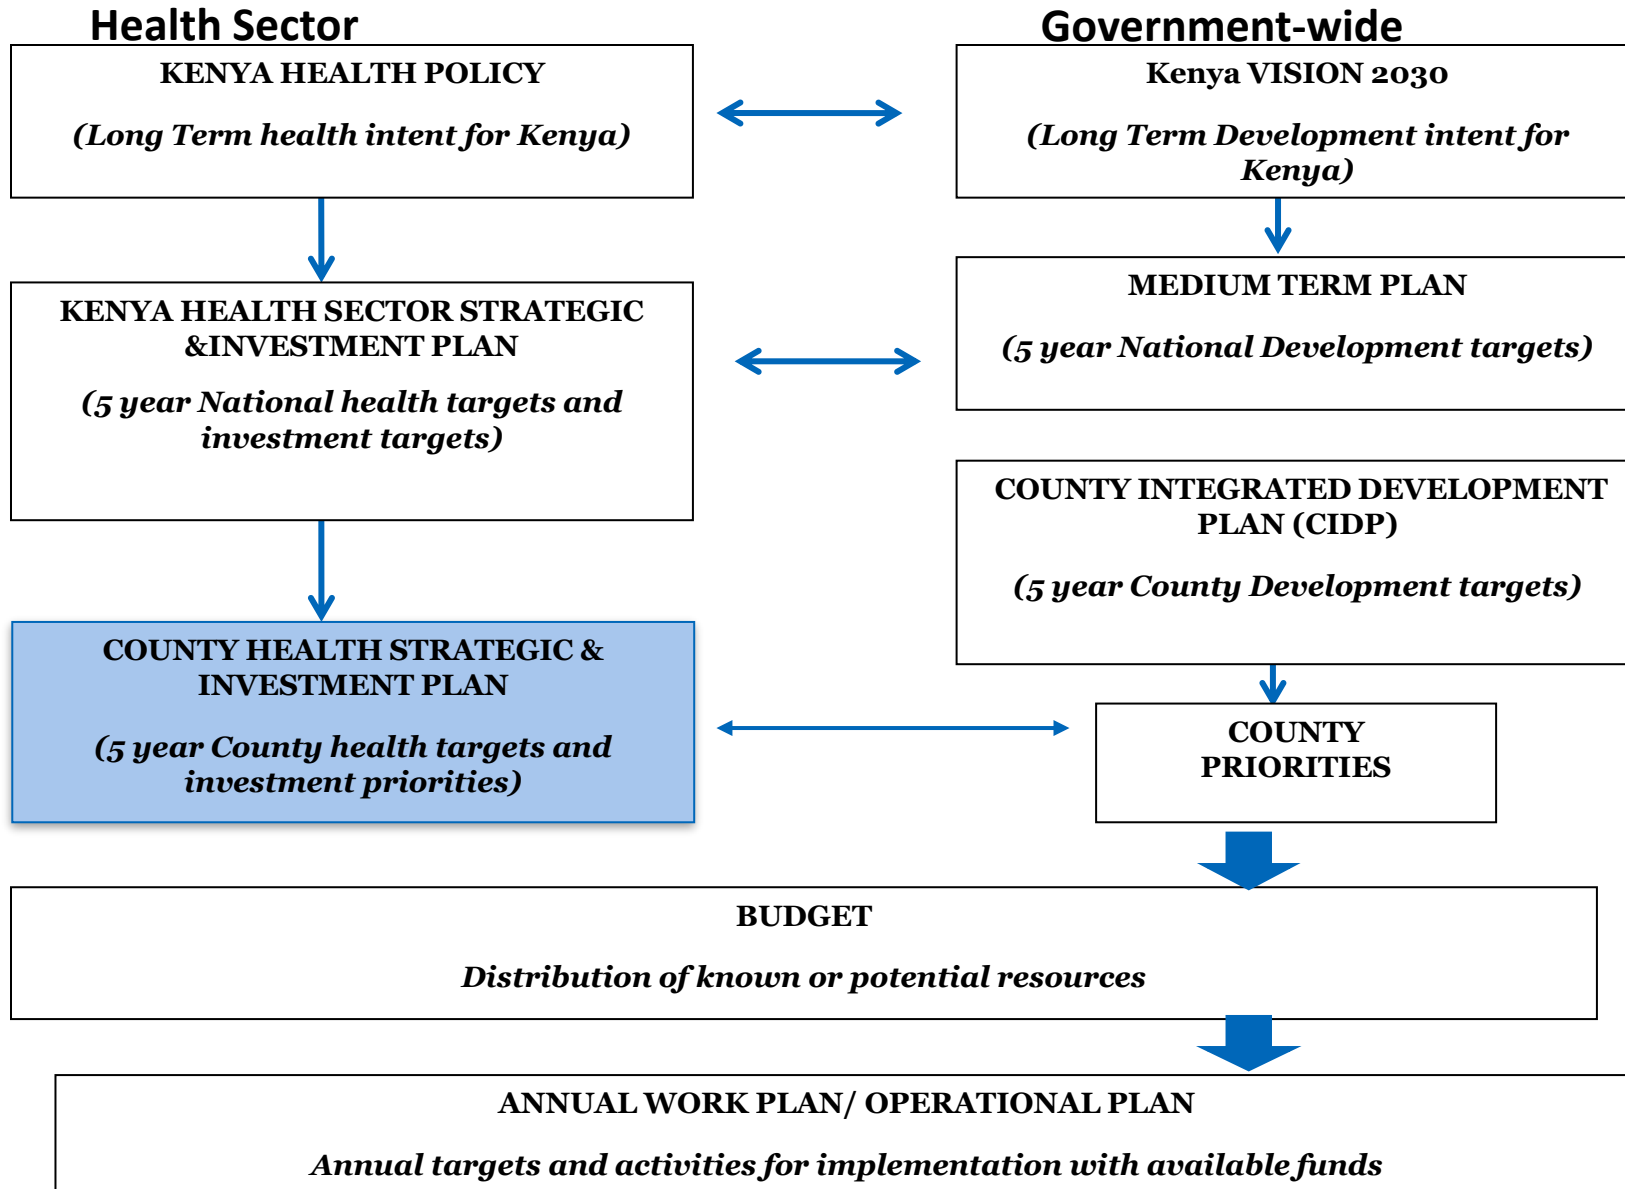

- **Long term plans** – plans over 5 years including policy frameworks
- **Medium term plans** – plans between 3 to 5 years
- **Strategic plans** – Envisions a desired future and translates this vision into broadly defined goals and objectives and sequence of steps to achieve them -the “Means”
- **Short term plans** – plans between 1 -2 years-this translates longer term plans into actionable parts for implementation in the present financial/budget year.

Planning Framework in Kenya

Annual WorkPlan

- Creating a work plan involves a structured approach that aligns with national health priorities
 - Situational Analysis-Identify gaps and needs
 - Develop Strategies and Activities
 - Implementation and Monitoring
- The workplan operationalises the strategic plans

Annual Work Plan

- The **Work Plan** outlines and specifies, on a quarterly basis, the main activities, quarterly targets for the key performance indicators (KPIs) and budget resources needed for the implementation.
- Specify the funds available and gaps
- A draft AWP is prepared during budget preparation and then finalized after budget appropriation.
- The milestones of the Work Plan – financial and KPIs targets – will be the reference points for the reporting and performance management.

Health Legislation, Regulation & standards																								-

The Annual Work Plan (AWP) template

- The annual work plan (AWP) template is a tool used to organize and track the activities and goals of a health sector organization for a given year.
- This particular template is organized into several sections;
- Results Areas-These are the broad areas of focus for the organization's work.
 - **Policy Making and Strategic Planning:** This involves the development and implementation of comprehensive policies and strategies
 - **Health Legislation, Regulation, and Standards:** This area focuses on creating and enforcing laws, regulations, and standards that govern the institution.
 - **Reporting and Monitoring:** This involves the collection, analysis, and dissemination of data for monitoring reporting on the institution performance and progress towards its goals.

The Annual Work Plan (AWP) template

- **Coordination and Partnerships:** This area emphasizes the collaboration with other government agencies, non-governmental organizations, and international partners
- **Resource Mobilization:** This encompasses activities aimed at securing financial and non-financial resources to support the institutions programs and initiatives. It includes fundraising, grant writing, and exploring innovative financing mechanisms.
- **Capacity Building and Technical Assistance:** This involves strengthening the skills, knowledge, and competencies of professionals. It includes training programs, mentoring, and the provision of technical expertise
- **Studies and Research:** This focuses on conducting research to generate evidence that can inform policy and practice.
- **Development of Guidelines and Protocols:** This involves creating and disseminating evidence-based guidelines and protocols for healthcare professionals and institutions to follow.

The Annual Work Plan (AWP) template

- **Advocacy and Awareness Creation:** This entails raising awareness, public education campaigns, media engagement, and stakeholder mobilization.
- **Health Service Delivery:** This encompasses the direct provision of health services to the population E.g. immunization programs
- **Health Products and Technologies:** This involves ensuring the availability, accessibility, and affordability of essential medicines, vaccines, and other health technologies. It includes procurement, and distribution of health products
- **Infrastructure Development:** This focuses on building and maintaining the physical infrastructure. It also includes investing in information systems and technology to support health services.

The Annual WorkPlan (AWP) template

- Main Activity - These are the specific actions or tasks that need to be carried out to achieve the objectives of the work plan-e.g Advocate for policy changes to improve health outcomes; Train healthcare workers in new clinical guidelines.
- Main activities in a work plan should always be expressed as action verbs (doing verbs). This ensures clarity and focus on the specific tasks or actions that need to be completed to achieve the desired outcomes.
- Conduct, Develop, Implement, Train ,Establish
- Sub activities-provide a more detailed breakdown of what needs to be done to achieve the main activity's-Recruit and select participants

The Annual WorkPlan (AWP) template

- **Key Performance Indicators (KPIs)**-used to assess the progress and success of the main activities-Measure -Number of policy recommendations adopted; Number of healthcare workers trained
- Main activities and performance indicators are closely linked. Each main activity should have one or more performance indicators associated with it
- **Expected Outputs** - These are the tangible results that are expected to be achieved as a result of completing a main activity
- **Performance Indicators** - These are the measures that will be used to assess whether the expected outputs have been achieved-percentage of health workers in the target area who have been trained

The Annual WorkPlan (AWP) template

- **Means of Verification:** This is the evidence that will be used to verify the performance indicators. For example, the means of verification for the percentage of health workers trained might be training attendance records.
- **Timelines-**The Months when the activity will be undertaken
- **Estimated Cost of the Activity-**Determines through the activity costing process
- **Source of funding:**
 - Approved budget (both Recurrent and Development) – Mainly GOK
 - Off-Budget Resources

The Annual WorkPlan (AWP) template

Key things to note

- AWP should to the greatest extent possible be programme based and linked to the MTEF
- Linked to SPs and budgets
- Planning must be participatory in approach
- Planning entities should have costed activities based on the outputs
- Planning should always be undertaken with consideration of the amount of resources available

THANK YOU
