To: Head of Procurement - KIPRE

From: Dr. George Omondi
HoD, K-SRIC, KIPRE

RE: ANTIVENOM PRODUCTION TENDER SPECIFICATION

1. Product Requirements

1.1. Product Description

The product shall be:

- Polyvalent Snake Antivenom
- Equine-derived
- F(ab')₂ fragments of IgG
- Intended for intravenous administration

1.2 Target Snake Species

The antivenom must demonstrate neutralizing capacity against venom from the following snake species of medical importance in Kenya:

- *Bitis* spp. (*B. arietans*, *B. nasicornis*, *B. rhinoceros*, *B. gabonica*)
- *Naja* spp. (*N. ashei*, *N. pallida*, *N. nigricollis*, *N. subfulva* and *N. haje*)
- *Dendroaspis* spp. (*D. polylepis*, *D. angusticeps* and *D. jamesonii*)
- *Echis* spp. (*E. pyramidum leakeyi*)

2. Pharmaceutical Specifications

Parameter	Requirement
Reconstitution	Lyophilized powder with 10 ml sterile water for injection BP as diluent
Route	Intravenous
Sterility	Must comply with WHO Guidelines for Production, Control and Regulation of Snake Antivenom Immunoglobulins.
Preservatives and stabilizers	Within accepted safety limits, comply with WHO Guidelines for Production, Control and Regulation of Snake Antivenom Immunoglobulins comply with WHO guidelines
Protein Purity	Documented purification process

3. Manufacturer Eligibility Criteria

Manufacturer must:

1. Be a licensed biological manufacturer
2. Hold valid GMP certification for biological products.
3. Have minimum **5 years continuous production** of snake antivenom.
4. Demonstrate annual production capacity sufficient to meet contract quantity.
5. Provide evidence of functioning pharmacovigilance system.

4. Regulatory Compliance

The product must:

- Be registered in the country of manufacture.
- Be registered (or eligible for registration) in the procuring country.
- Comply with WHO Guidelines for Production, Control and Regulation of Snake Antivenom Immunoglobulins.
- Comply with applicable Pharmacopoeia (IP / BP / USP / Ph. Eur.).

5. Production & Quality Requirements

Manufacturer shall provide documentation on:

5.1. Immunization & Plasma Collection

- Animal welfare standards
- Plasma screening procedures

5.2. Purification Process (comply with WHO Guidelines for Production, Control and Regulation of Snake Antivenom Immunoglobulins comply with WHO guidelines)

6. Batch Testing

After production each batch must undergo:

- Neutralization potency testing
- Sterility testing
- Protein content and purity assessment

Independent preclinical testing to be conducted after.

7. Stability & Shelf Life

- Storage condition: Room temperature, preferably at temperature below 30°C
- Shelf life: At least 4 years

8. Packaging & Cold Chain

- Single-use vials (glass vials)
- Clear labelling [Product batch number, Mfg. date, Exp. date, storage condition, diluent information (Batch number, Mfg. Date, Exp. Date)]

9. Quantity

A batch of 100,000 vials.
